Foreword .....	xi
Introduction.....	xii
1 Scope.....	1
2 Conformance .....	2
3 Normative references .....	3
4 Terms and definitions .....	4
5 Conventions .....	8
5.1 Abbreviated terms.....	8
5.2 Use of examples .....	9
5.3 XML schemas.....	9
5.4 UML Notation .....	9
5.4.1 Class diagrams .....	9
5.4.2 State machine notation .....	10
6 Basic service elements .....	11
6.1 Introduction.....	11
6.2 Version numbering and negotiation.....	11
6.2.1 Version number form and value .....	11
6.2.2 Appearance in service metadata and in requests.....	11
6.2.3 Version number negotiation.....	11
6.2.4 Request encoding .....	11
6.2.5 KVP parameter encoding rules .....	12
6.3 Namespaces.....	13
6.4 Service bindings.....	13
7 Common elements .....	13
7.1 Encoding of features.....	13
7.2 Resource identifiers .....	13
7.2.1 Assigning resource identifiers.....	13
7.2.2 Encoding resource identifiers.....	14
7.2.3 Version identification .....	14
7.3 Property references.....	14
7.3.1 XPath subset.....	14
7.3.2 Accessor function .....	14
7.4 Predicate expression encoding .....	15
7.5 Exception reporting.....	15
7.6 Common request parameters .....	17
7.6.1 Introduction.....	17
7.6.2 Base request type.....	17
7.6.3 Standard presentation parameters.....	19
7.6.4 Standard resolve parameters .....	22
7.6.5 Standard input parameters.....	25
7.6.6 Additional common keywords for KVP-encoded requests .....	26
7.7 Standard response parameters .....	27
7.7.1 Parameter semantics .....	27
7.7.2 XML encoding .....	27
7.7.3 KVP encoding .....	27
7.7.4 Parameter discussion .....	27
7.8 Use of the schemaLocation attribute .....	30
7.9 Query expressions .....	30

7.9.1	Introduction .....	30
7.9.2	Ad hoc query expression .....	30
7.9.3	Stored query expression .....	40

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 19142 was prepared by Technical Committee ISO/TC 211, *Geographic Information/Geomatics*, in collaboration with the Open Geospatial Consortium, Inc. (OGC). The Web Feature Service (WFS) was originated within OGC.

## Introduction

The Web Feature Service (WFS) represents a change in the way geographic information is created, modified and exchanged on the Internet. Rather than sharing geographic information at the file level using File Transfer Protocol (FTP), for example, the WFS offers direct fine-grained access to geographic information at the feature and feature property level. Web feature services allow clients to only retrieve or modify the data they are seeking, rather than retrieving a file that contains the data they are seeking and possibly much more. That data can then be used for a wide variety of purposes, including purposes other than their producers' intended ones.

In the taxonomy of services defined in ISO 19119, the WFS is primarily a feature access service but also includes elements of a feature type service, a coordinate conversion/transformation service and a geographic format conversion service.

# Geographic information — Web Feature Service

## 1 Scope

This International Standard specifies the behaviour of a web feature service that provides transactions on and access to geographic features in a manner independent of the underlying data store. It specifies discovery operations, query operations, locking operations, transaction operations and operations to manage stored parameterized query expressions.

Discovery operations allow the service to be interrogated to determine its capabilities and to retrieve the application schema that defines the feature types that the service offers.

Query operations allow features or values of feature properties to be retrieved from the underlying data store based upon constraints, defined by the client, on feature properties.

Locking operations allow exclusive access to features for the purpose of modifying or deleting features.

Transaction operations allow features to be created, changed, replaced and deleted from the underlying data store.

Stored query operations allow clients to create, drop, list and describe parameterized query expressions that are stored by the server and can be repeatedly invoked using different parameter values.

NOTE This International Standard does not address the access control issues.

This International Standard defines 11 operations:

- GetCapabilities (discovery operation);
- DescribeFeatureType (discovery operation);
- GetPropertyValue (query operation);
- GetFeature (query operation);
- LockFeature (locking operation);
- GetFeatureWithLock (query and locking operation);
- Transaction (transaction operation);
- CreateStoredQuery (stored query operation);
- DropStoredQuery (stored query operation);
- ListStoredQueries (stored query operation);
- DescribeStoredQueries (stored query operation).
