## Guidelines and recommendations for building metadata application profiles for agricultural learning resources

This CEN Workshop Agreement has been drafted and approved by a Workshop of representatives of interested parties, the constitution of which is indicated in the foreword of this Workshop Agreement.

The formal process followed by the Workshop in the development of this Workshop Agreement has been endorsed by the National Members of CEN but neither the National Members of CEN nor the CEN Management Centre can be held accountable for the technical content of this CEN Workshop Agreement or possible conflicts with standards or legislation.

This CEN Workshop Agreement can in no way be held as being an official standard developed by CEN and its Members.

This CEN Workshop Agreement is publicly available as a reference document from the CEN Members National Standard Bodies.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

## **FOREWORD**

This CEN Workshop Agreement (CWA) assesses the current status in the development and implementation of metadata standards and specifications for describing learning resources in agricultural learning repositories (AgLRs). It also provides a set of recommendations for the development of metadata application profiles in AgLRs, in the light of CWA 15555 "Guidelines and support for building application profiles in e-learning".

This CWA is directly related to the European Commission's Mandate M/280 "Standardisation mandate to CEN, CENELEC and ETSI in the domain of "Learning and Training Technologies & Educational Multimedia Software", covering the development of a work plan for standards related activities in relation to Learning Technologies.

The development of this CWA was one of the recommendations for further work. This document has been developed through the collaboration of a number of contributing partners, representing a wide mix of interests. These include academia, educational software developers and integrators, educational publishers, telecommunication service providers and learning technology consultants. The present CWA has received the support of representatives of these sectors.

List of companies which have supported this document:

- Greek Research & Technology Network
- Katholieke Universiteit Leuven
- Food and Agriculture Organization of the United Nations
- University of Duisburg-Essen
- Agro-Know Technologies

The final review/endorsement round for this CWA was started on 2008-07-01 and was successfully closed on 2009-01-09. The final text of this CWA was submitted to CEN for publication on 2009-03-05.

This CEN Workshop Agreement is publicly available as a reference document from the National Members of CEN : AENOR, AFNOR, ASRO, BDS, BSI, CSNI, CYS, DIN, DS, ELOT, EVS, IBN, IPQ, IST, LVS, LST, MSA, MSZT, NEN, NSAI, ON, PKN, SEE, SIS, SIST, SFS, SN, SNV, SUTN and UNI.

Comments or suggestions from the users of the CEN Workshop Agreement are welcome and should be addressed to the CEN Management Centre.

## 1 SCOPE

This report focuses on application profiles of learning resource/object metadata for rural and agricultural education. This covers both learning resources that are covering agricultural topics in specific, as well as more generic life science and other topics that are relevant for rural and agricultural learners.

Efforts in the development of methodologies, standards and application development in the domains of rural and agricultural education are at present widely dispersed. The amount of digitally available information is growing exponentially and appropriate steps need to be undertaken to facilitate sharing and consequently reduce efforts and costs. These information resources are often located in proprietary applications and use dissimilar data models, which hampers information sharing. Additionally, information system designers are sometimes unaware of existing design methodologies, data description standards, freely available tools and applications.

Learning Technology (LT) specifications and standards have not yet been widely adopted and implemented. Few initiatives have reported implementing some of them – more often to describe learning resources using some metadata standard such as IEEE LOM and Dublin Core (DC), and less often for sequencing them (e.g. SCORM). In this direction, the Food and Agriculture Organization (FAO) of the United Nations, has recently supported the launch of an Agricultural Learning Repositories Task Force (AgLR-TF, <http://aglr.aua.gr>). This community of experts working on learning resources related to rural and agricultural populations, has been collecting, reviewing, and studying implemented metadata application profiles (APs) in AgLRs around the world and trying to elaborate mappings among them. Collaboration between CEN WS-LT with AgLR-TF has been decided, in order to help achieve the wider dissemination of LT standards for applications of the rural and agricultural domain, and potentially reach consensus on how similar approaches should be implemented.

## **2 NORMATIVE REFERENCES**

This CEN Workshop Agreement incorporates, by dated or undated references, provisions from other sources. These normative references are cited at the appropriate places in the text, and the publications are listed hereafter. For dated references, subsequent amendments to or revisions of any of these publications do not apply. However, parties to agreements based on this CWA are encouraged to investigate the possibility of applying the most recent editions of the normative documents indicated below. For undated references, the latest edition of the normative document referred to applies.

### **2.1 TERMS AND DEFINITIONS**

**Application profile:** “An application profile is an assemblage of metadata elements selected from one or more metadata schemas and combined in a compound schema. [...] The purpose of an application profile is to adapt or combine existing schemas into a package that is tailored to the functional requirements of a particular application, while retaining interoperability with the original base schemas.” (Duval et al., 2002).
