Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 2332 was prepared by Technical Committee ISO/TC 23, *Tractors and machinery for agriculture and forestry*, Subcommittee SC 4, *Tractors*.

This third edition cancels and replaces the second edition (ISO 2332:1993), which has been technically revised.

Agricultural tractors and machinery — Connection of implements via three-point linkage — Clearance zone around implement

1 Scope

This International Standard specifies the clearance zone around an implement for attachment to the three-point linkage of an agricultural wheeled tractor.

It is applicable to the connection of agricultural implements to three-point linkages complying with ISO 730, and also where implement couplers complying with ISO 11001-1, ISO 11001-2, ISO 11001-3 and ISO 11001-4 are used.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 730:2009, *Agricultural wheeled tractors — Rear-mounted three-point linkage — Categories 1N, 1, 2N, 2, 3N, 3, 4N and 4*

ISO 11001 (all parts), *Agricultural wheeled tractors and implements — Three-point hitch couplers*

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

3.1

implement coupler

device which facilitates the connection of tractor three-point linkage to the implement

3.2

transport pitch

pitch reached by the mast when lifted to standard transport height from a position with lower links horizontal and mast vertical

[ISO 730:2009, 3.2.24]

4 Specifications

The shape and dimensions of the clearance zone around implements for attachment to a three-point linkage shall be as shown in Figures 1 to 4 and as given in Table 1. Not included are adjustable levers and handles used to operate the implement, or specifications referring to the width of the implements.
