Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 8536-1 was prepared by Technica Committee ISO/TC 76, Transfusion, infusion and injection equipment for medical and pharmaceutical use.

This third edition cancels and replaces the second edition (ISO 8536-1:2000) and amendment ISO 8536-1:2000/Amd.1:2004, of which it consultates a minor revision.

ISO 8536 consists of the following parts, under the general title Infusion equipment for medical use:

C

- Part 1: Infusion glass bottles

- Part 1: Infusion glass bottles
 Part 2: Closures for infusion bottles
 Part 3: Aluminium caps for infusion bottles
 Part 4: Infusion sets for single use, gravity feed
 Part 5: Burette infusion sets for single use, gravity feed
 Part 6: Freeze drying closures for infusion bottles
 Part 7: Caps made of aluminium-plastics combinations for infusion bottles
- Part 8: Infusion equipment for use with pressure infusion apparatus
- Part 9: Fluid lines for use with pressure infusion equipment
- Part 10: Accessories for fluid lines for use with pressure infusion equipment
- Part 11: Infusion filters for use with pressure infusion equipment
- Part 12: Check valves

Introduction

Infusion bottles are suitable primary packaging materials for the storage of infusion solutions until they are administered to the patient. Due to the direct contact between infusion solution and the primary container components and in view of the extended storage periods, possible interactions must be avoided in order to

Initial of bottles are suitable primary packaging materials for the storage of initials oscillation and the primary container components and in view of the extended storage periods, possible interactions must be avoided in order to guarantee the patient's gafety. Adequate means to achieve this goal include the proper selection of the primary packaging materials, the choice of suitable package design and the availability of specific criteria and methods for testing of infutuel container systems.

Infusion equipment for medical use —

Part 1: Infusion glass bottles

1 Scope

This part of ISO 8536 specifies the dimensions, performance and requirements of infusion glass bottles necessary to ensure functional interchangeability. It is applicable only to infusion bottles for single use.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 719:1985, Glass — Hydrolytic resistance of glass grains at 98 °C — Method of test and classification

ISO 720:1985, Glass — Hydrolytic resistance of glass grains at 121 °C — Method of test and classification

ISO 1101:2004, Geometrical Product Specifications (GPS) — Geometrical tolerancing — Tolerances of form, orientation, location and run-out

ISO 4802-1:1988, Glassware — Hydrolytic resistance of the interior surfaces of glass containers — Part 1: Determination by titration method and classification

ISO 4802-2:1988, Glassware — Hydrolytic resistance of the interior surfaces of glass containers — Part 2: Determination by flame spectrometry and classification

ISO 7458:2004, Glass containers — Internal pressure resistance — Text prethods

ISO 7459:2004, Glass containers — Thermal shock resistance and thermal pock endurance — Test methods

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 4802-1 and ISO 4802-2 apply.
