

Aerospace series - Burning behaviour of non metallic materials under the influence of radiating heat and flames - Determination of gas components in the smoke

EESTI STANDARDI EESSÕNA

NATIONAL FOREWORD

Käesolev Eesti standard EVS-EN 2826:2011 sisaldb Euroopa standardi EN 2826:2011 ingliskeelset teksti. Standard on kinnitatud Eesti Standardikeskuse 31.03.2011 käskkirjaga ja jõustub sellekohase teate avaldamisel EVS Teatajas. Euroopa standardimisorganisatsioonide poolt rahvuslikele liikmetele Euroopa standardi teksti kätesaadavaks tegemise kuupäev on 23.02.2011. Standard on kätesaadav Eesti standardiorganisatsionist.	This Estonian standard EVS-EN 2826:2011 consists of the English text of the European standard EN 2826:2011. This standard is ratified with the order of Estonian Centre for Standardisation dated 31.03.2011 and is endorsed with the notification published in the official bulletin of the Estonian national standardisation organisation. Date of Availability of the European standard text 23.02.2011. The standard is available from Estonian standardisation organisation.

EUROPEAN STANDARD

EN 2826

NORME EUROPÉENNE

EUROPÄISCHE NORM

February 2011

ICS 13.220.40; 49.025.99

English Version

Aerospace series - Burning behaviour of non metallic materials
under the influence of radiating heat and flames - Determination
of gas components in the smoke

Série aérospatiale - Comportement au feu des matériaux
non métalliques sous l'action de chaleur rayonnante et de
flammes - Détermination des composants de gaz de fumée

Luft- und Raumfahrt - Brandverhalten nicht metallischer
Werkstoffe unter Einwirkung von strahlender Wärme und
Flammen - Bestimmung von Rauchgaskomponenten

This European Standard was approved by CEN on 17 December 2010.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This document (EN 2826:2011) has been prepared by the Aerospace and Defence Industries Association of Europe - Standardization (ASD-STAN).

After enquiries and votes carried out in accordance with the rules of this Association, this Standard has received the approval of the National Associations and the Official Services of the member countries of ASD, prior to its presentation to CEN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement at the latest by August 2011, and conflicting national standards shall be withdrawn at the latest by August 2011.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and the United Kingdom.

1 Scope

This European Standard defines a test method to determine the concentration of certain gas components due to pyrolytic decomposition of solid materials and composite materials under the influence of radiant heat only or with simultaneous flame application.

NOTE 1 The gas components in the smoke are determined according to the specific environmental and test conditions defined in EN 2824 and this standard. No studies have been made up to now to determine whether the results can be transferred to different conditions, particularly to actual fire conditions. The inhalatory toxicological risk and irritancy effect cannot be assessed by merely measuring the concentration of individual gas components in the smoke.

NOTE 2 The burning behaviour and consequently the gas components in the smoke of aerospace materials are not only influenced by the type of material but also to a large extent by the configuration, the specific surface and mass, the combination with other materials, the means of joining as well as the processing technique.

NOTE 3 These influences shall be taken into account in the preparation of tests, the selection of test specimens and the interpretation of test results.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN 2824, Aerospace series — Burning behaviour of non-metallic materials under the influence of radiating heat and flames — Determination of smoke density and gas components in the smoke of materials — Test equipment apparatus and media¹⁾

EN 2825, Aerospace series — Burning behaviour of non-metallic materials under the influence of radiating heat and flames — Determination of smoke density

EN ISO 13943:2008, Fire safety — Vocabulary (ISO 13943:2008)

3 Short description of the test method

3.1 General

The specimens are vertically arranged in a closed test chamber according to EN 2824 and subjected to decomposition by radiant heat with or without flame application. During the test, gas samples are taken at specified intervals from the generated decomposition products to determine the concentration of selected components.

The methods described in 3.2 and 3.4 are used to determine the gas components in the smoke.

3.2 The hydrogen chloride (HCl) taken from the test chamber can be indicated directly during the test using colorimetric tubes or analyzed by wet analysis.

3.3 Hydrogen fluoride (HF) is measured by wet analysis.

3.4 For determination of other gases, the fumes are collected in a plastic bag with a high gas-isolation value; they can be measured consecutively using colorimetric tubes.
