EESTI STANDARDI EESSÕNA

NATIONAL FOREWORD

See Eesti standard EVS-EN 50155:2017 sisaldab Euroopa standardi EN 50155:2017 ingliskeelset teksti.	This Estonian standard EVS-EN 50155:2017 consists of the English text of the European standard EN 50155:2017.
Standard on jõustunud sellekohase teate avaldamisega EVS Teatajas.	This standard has been endorsed with a notification published in the official bulletin of the Estonian Centre for Standardisation.
Euroopa standardimisorganisatsioonid on teinud Euroopa standardi rahvuslikele liikmetele kättesaadavaks 13.10.2017.	Date of Availability of the European standard is 13.10.2017.
Standard on kättesaadav Eesti Standardikeskusest.	The standard is available from the Estonian Centre for Standardisation.

Tagasisidet standardi sisu kohta on võimalik edastada, kasutades EVS-i veebilehel asuvat tagasiside vormi või saates e-kirja meiliaadressile standardiosakond@evs.ee.

This European Standard was approved by CENELEC on 2017-05-08. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

European foreword

This document (EN 50155:2017) has been prepared by CLC/SC 9XB, "Electrical, electronic and electromechanical material on board rolling stock, including associated software".

The following dates are fixed:

- latest date by which this document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2018-04-13
- latest date by which the national standards conflicting with this document have to be withdrawn (dow) 2020-10-13

This document supersedes EN 50155:2007.

EN 50155:2017 includes the following significant technical changes with respect to EN 50155:2007:

- a) revision of Clause 1, Scope;
- b) revision of Clause 2, Normative references;
- c) revision of Clause 3, Terms, definitions and abbreviations, with reorganisation of subclauses;
- d) improvement of Clause 4, General requirements, in terms of better wording, requirement expansion and reorganisation of subclauses;
- e) revision of Clause 5, Electrical service conditions, with reorganisation of subclauses;
- f) improvement of Clause 6, Reliability, maintainability and expected useful life, with reorganization of subclauses and introduction of explicative figures;
- g) revision of Clause 7, Design;
- h) introduction of a new Clause 8, Non-railway designed electronic equipment;
- i) renumbering of previous Clause 8 to Clause 9, Components, and revision;
- j) renumbering of previous Clause 9 to Clause 10, Construction, and introduction of new requirements;
- k) renumbering of previous Clause 10 to Clause 11, Safety, and improving of the wording;
- l) renumbering of previous Clause 11 to Clause 12, Documentation, and introduction of new requirements also considering new technologies;
- m) renumbering of previous Clause 12 to Clause 13, Testing, text improvement with a particular attention to table "List of tests" and introduction of explaining figures;
- n) introduction of the following informative Annexes:
 - 1) Annex A - List of default requirements of EN 50155 and related clauses;
 - 2) Annex B - Testing approach;

- 3) Annex C - Severity of the service conditions in different rolling stock locations;
- 4) Annex D - Example of test report compliance summary;
- 5) Annex E - Life cycle model examples;
- 6) Annex F - Design guidelines for electronic hardware used on board of rolling stock;
- 7) Annex G - Non-railway designed electronic equipment;
- o) Bibliography (extended and corrected).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC shall not be held responsible for identifying any or all such patent rights.

This document has been prepared under a mandate given to CENELEC by the European Commission and the European Free Trade Association, and supports essential requirements of EU Directive(s).

For the relationship with EU Directive 2008/57/EC amended by Commission Directive 2011/18/EU, see informative Annex ZZ, which is an integral part of this document.

Introduction

This standard is applied in the design, manufacturing, testing of any electronic equipment installed on board rolling stock.

It also describes the electrical and environmental operating conditions.

There are not correlations between the operating temperature classes listed in Table 1 and the air temperature classes listed in EN 50125-1:2014, Table 2.

The aim of this standard is not to be a detailed guideline for the design of the electronic equipment; the design is made under the responsibility of the supplier. The supplier should take into account the requirements resulting from the specific location of the on board installation (see Annex C).

This standard contains the design, the documentation and the testing requirements.

The roles of user and/or supplier are shown in Figure 1 below.

Figure 1 — Roles and relationship of user and/or supplier

1 Scope

This European Standard applies to all electronic equipment for control, regulation, protection, diagnostic, energy supply, etc. installed on rail vehicles.

For the purpose of this European Standard, electronic equipment is defined as equipment mainly composed of semiconductor devices and recognized associated components. These components will mainly be mounted on printed boards.

Sensors (current, voltage, speed, etc.) and Semiconductor drive unit (SDU) for power electronic devices are covered by this standard. Complete Semiconductor drive unit (SDU) and power converters are covered by EN 61287-1.

This European Standard covers the conditions of operation, design requirements, documentation, and testing of electronic equipment, as well as basic hardware and software requirements considered necessary for compliant and reliable equipment.

Specific requirements related to practices necessary to ensure defined levels of functional safety will be determined in accordance with relevant railway safety standards.

The software requirements for on board railway equipment are specified by EN 50657.
