### About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

### About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

#### IEC Catalogue - [webstore.iec.ch/catalogue](http://webstore.iec.ch/catalogue)

The stand-alone application for consulting the entire bibliographical information on IEC International Standards, Technical Specifications, Technical Reports and other documents. Available for PC, Mac OS, Android Tablets and iPad.

#### IEC publications search - [www.iec.ch/searchpub](http://www.iec.ch/searchpub)

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and also once a month by email.

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

The world's leading online dictionary of electronic and electrical terms containing 20 000 terms and definitions in English and French, with equivalent terms in 15 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

#### IEC Glossary - [std.iec.ch/glossary](http://std.iec.ch/glossary)

65 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

#### IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [csc@iec.ch](mailto:csc@iec.ch).

### A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

### A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

#### Catalogue IEC - [webstore.iec.ch/catalogue](http://webstore.iec.ch/catalogue)

Application autonome pour consulter tous les renseignements bibliographiques sur les Normes internationales, Spécifications techniques, Rapports techniques et autres documents de l'IEC. Disponible pour PC, Mac OS, tablettes Android et iPad.

#### Recherche de publications IEC - [www.iec.ch/searchpub](http://www.iec.ch/searchpub)

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études,...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et aussi une fois par mois par email.

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

Le premier dictionnaire en ligne de termes électroniques et électriques. Il contient 20 000 termes et définitions en anglais et en français, ainsi que les termes équivalents dans 15 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

#### Glossaire IEC - [std.iec.ch/glossary](http://std.iec.ch/glossary)

65 000 entrées terminologiques électrotechniques, en anglais et en français, extraites des articles Termes et Définitions des publications IEC parues depuis 2002. Plus certaines entrées antérieures extraites des publications des CE 37, 77, 86 et CISPR de l'IEC.

#### Service Clients - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: [csc@iec.ch](mailto:csc@iec.ch).

## CONTENTS

|                                                                                                    |    |
|----------------------------------------------------------------------------------------------------|----|
| FOREWORD.....                                                                                      | 10 |
| INTRODUCTION.....                                                                                  | 12 |
| 1 Scope.....                                                                                       | 13 |
| 2 Normative references.....                                                                        | 14 |
| 3 Terms and definitions .....                                                                      | 16 |
| 3.1 Terms and definitions relating to plugs and socket-outlets.....                                | 17 |
| 3.2 Terms and definitions relating to terminals.....                                               | 18 |
| 3.3 Terms and definitions relating to residual current functions .....                             | 19 |
| 3.3.1 Terms and definitions relating to currents flowing from live parts to earth.....             | 19 |
| 3.3.2 Terms and definitions relating to the energization of the residual current function .....    | 20 |
| 3.3.3 Terms and definitions relating to the operation and to the functions of the IC-CPD .....     | 20 |
| 3.3.4 Terms and definitions relating to values and ranges of energizing quantities.....            | 22 |
| 3.3.5 Terms and definitions relating to values and ranges of influencing quantities.....           | 24 |
| 3.3.6 Conditions of operation .....                                                                | 24 |
| 3.3.7 Terms and definitions relating to control functions between electric vehicle and IC-CPD..... | 25 |
| 3.4 Terms and definitions relating to tests .....                                                  | 25 |
| 3.5 Terms and definitions relating to construction .....                                           | 26 |
| 4 Classification.....                                                                              | 26 |
| 4.1 According to the supply .....                                                                  | 26 |
| 4.1.1 General .....                                                                                | 26 |
| 4.1.2 IC-CPD supplied from one phase and neutral (LNSE or LNE).....                                | 26 |
| 4.1.3 IC-CPD supplied from two phases (LLSE or LLE).....                                           | 26 |
| 4.1.4 IC-CPD supplied from three phases and neutral (LLLNSE or LLLNE) .....                        | 26 |
| 4.2 According to the construction .....                                                            | 26 |
| 4.2.1 General .....                                                                                | 26 |
| 4.2.2 IC-CPD including the function box separated from the plug and connector.....                 | 26 |
| 4.2.3 IC-CPD with the function box integrated together with the plug.....                          | 26 |
| 4.2.4 Modular IC-CPD.....                                                                          | 27 |
| 4.3 According to the method of connecting the cable(s) .....                                       | 27 |
| 4.3.1 General .....                                                                                | 27 |
| 4.3.2 Non-rewirable IC-CPDs .....                                                                  | 27 |
| 4.3.3 IC-CPDs wired by the manufacturer.....                                                       | 27 |
| 4.3.4 Pluggable IC-CPD.....                                                                        | 27 |
| 4.4 Classification according to the protective conductor path .....                                | 27 |
| 4.4.1 General .....                                                                                | 27 |
| 4.4.2 IC-CPDs with switched protective conductor .....                                             | 27 |
| 4.4.3 IC-CPDs with non-switched protective conductor .....                                         | 28 |
| 4.5 Classification according to behaviour in case of open protective conductor.....                | 28 |
| 4.5.1 General .....                                                                                | 28 |

|        |                                                                                                                            |    |
|--------|----------------------------------------------------------------------------------------------------------------------------|----|
| 4.5.2  | IC-CPD with verification of the availability of the upstream protective conductor.....                                     | 28 |
| 4.5.3  | IC-CPD without verification of the availability of the upstream protective conductor.....                                  | 28 |
| 5      | Characteristics of IC-CPDs .....                                                                                           | 28 |
| 5.1    | Summary of characteristics .....                                                                                           | 28 |
| 5.2    | Rated quantities and other characteristics .....                                                                           | 29 |
| 5.2.1  | Rated voltages.....                                                                                                        | 29 |
| 5.2.2  | Rated current ( $I_n$ ).....                                                                                               | 29 |
| 5.2.3  | Rated residual operating current ( $I_{\Delta n}$ ) .....                                                                  | 29 |
| 5.2.4  | Rated residual non-operating current ( $I_{\Delta no}$ ).....                                                              | 29 |
| 5.2.5  | Rated frequency.....                                                                                                       | 29 |
| 5.2.6  | Rated making and breaking capacity ( $I_m$ ) .....                                                                         | 29 |
| 5.2.7  | Rated residual making and breaking capacity ( $I_{\Delta m}$ ) .....                                                       | 30 |
| 5.2.8  | Operating characteristics in case of residual currents comprising a d.c. component.....                                    | 30 |
| 5.2.9  | Insulation coordination including creepage distances and clearances .....                                                  | 30 |
| 5.2.10 | Coordination with short-circuit protection devices (SCPDs) .....                                                           | 30 |
| 5.3    | Standard and preferred values .....                                                                                        | 30 |
| 5.3.1  | Preferred values of rated operational voltage ( $U_e$ ) .....                                                              | 30 |
| 5.3.2  | Preferred values of rated current ( $I_n$ ).....                                                                           | 30 |
| 5.3.3  | Standard values of rated residual operating current ( $I_{\Delta n}$ ) .....                                               | 31 |
| 5.3.4  | Standard value of rated residual non-operating current ( $I_{\Delta no}$ ) .....                                           | 31 |
| 5.3.5  | Standard minimum value of the non-operating overcurrent through the IC-CPD .....                                           | 31 |
| 5.3.6  | Preferred values of rated frequency .....                                                                                  | 31 |
| 5.3.7  | Minimum value of the rated making and breaking capacity ( $I_m$ ) .....                                                    | 31 |
| 5.3.8  | Minimum value of the rated residual making and breaking capacity ( $I_{\Delta m}$ ) .....                                  | 31 |
| 5.3.9  | Standard value of the rated conditional short-circuit current ( $I_{nc}$ ) .....                                           | 32 |
| 5.3.10 | Standard value of the rated conditional residual short-circuit current ( $I_{\Delta c}$ ) .....                            | 32 |
| 5.3.11 | Limit values of break time.....                                                                                            | 32 |
| 6      | Marking and other product information .....                                                                                | 32 |
| 6.1    | Data to be marked on the IC-CPD.....                                                                                       | 32 |
| 6.2    | Information to be provided to the end-user.....                                                                            | 34 |
| 7      | Standard conditions for operation in service and for installation .....                                                    | 35 |
| 7.1    | Standard conditions .....                                                                                                  | 35 |
| 7.2    | Conditions for installations .....                                                                                         | 36 |
| 8      | Requirements for construction and operation.....                                                                           | 36 |
| 8.1    | Mechanical design .....                                                                                                    | 36 |
| 8.2    | Pluggable electrical connections of pluggable IC-CPDs according to 4.3.4 .....                                             | 37 |
| 8.2.1  | General .....                                                                                                              | 37 |
| 8.2.2  | Degree of protection of pluggable electrical connection against solid foreign objects and water for pluggable IC-CPD ..... | 37 |
| 8.2.3  | Breaking capacity of pluggable electrical connection for pluggable IC-CPD .....                                            | 38 |
| 8.2.4  | Additional requirements.....                                                                                               | 38 |
| 8.3    | Construction .....                                                                                                         | 38 |
| 8.3.1  | General .....                                                                                                              | 38 |

|        |                                                                                                                     |    |
|--------|---------------------------------------------------------------------------------------------------------------------|----|
| 8.3.2  | Terminations of IC-CPDs.....                                                                                        | 39 |
| 8.3.3  | Enclosure of IC-CPDs according to 4.3.3.....                                                                        | 39 |
| 8.3.4  | Terminal screws or nuts of IC-CPDs according to 4.3.3.....                                                          | 39 |
| 8.3.5  | Strain on the conductors of IC-CPDs according to 4.3.3.....                                                         | 40 |
| 8.3.6  | Additional requirements for IC-CPDs according to 4.3.3.....                                                         | 40 |
| 8.3.7  | Insulating parts which keep the live parts in position.....                                                         | 40 |
| 8.3.8  | Screws for IC-CPD according to 4.3.3.....                                                                           | 40 |
| 8.3.9  | Means for suspension from a wall or other mounting surfaces.....                                                    | 40 |
| 8.3.10 | Plug as an integral part of plug-in equipment.....                                                                  | 40 |
| 8.3.11 | Flexible cables and cords and their connection.....                                                                 | 41 |
| 8.4    | Electrical performance.....                                                                                         | 42 |
| 8.4.1  | Protective conductor path.....                                                                                      | 42 |
| 8.4.2  | Contact mechanism.....                                                                                              | 42 |
| 8.4.3  | Clearances and creepage distances (see Annex C).....                                                                | 43 |
| 8.5    | Protection against electric shock.....                                                                              | 45 |
| 8.5.1  | General.....                                                                                                        | 45 |
| 8.5.2  | Requirements relating to plugs, whether incorporated or not in integral items.....                                  | 46 |
| 8.5.3  | Degree of protection of the function box.....                                                                       | 46 |
| 8.5.4  | Requirements relating to vehicle connectors.....                                                                    | 46 |
| 8.6    | Dielectric properties.....                                                                                          | 46 |
| 8.7    | Temperature rise.....                                                                                               | 47 |
| 8.8    | Operating characteristics.....                                                                                      | 47 |
| 8.8.1  | General.....                                                                                                        | 47 |
| 8.8.2  | Safe connection operating characteristics.....                                                                      | 47 |
| 8.8.3  | Operating characteristics with a.c. residual currents and residual currents having a d.c. component.....            | 47 |
| 8.8.4  | Operating characteristics with smooth d.c. residual current.....                                                    | 48 |
| 8.8.5  | Behaviour of the IC-CPD after a residual current operation.....                                                     | 48 |
| 8.8.6  | Residual pulsating direct currents which may result from rectifying circuits supplied from two phases.....          | 48 |
| 8.8.7  | Residual pulsating direct currents which may result from rectifying circuits supplied from three phases.....        | 48 |
| 8.9    | Mechanical and electrical endurance.....                                                                            | 48 |
| 8.10   | Performance at short-circuit currents.....                                                                          | 49 |
| 8.11   | Resistance to mechanical shock and impact.....                                                                      | 49 |
| 8.12   | Resistance to heat.....                                                                                             | 49 |
| 8.13   | Resistance to abnormal heat and to fire.....                                                                        | 49 |
| 8.14   | Performance of the test function.....                                                                               | 49 |
| 8.15   | Behaviour in case of loss of the supply voltage.....                                                                | 50 |
| 8.16   | Resistance of IC-CPDs against unwanted tripping due to surge currents to earth resulting from impulse voltages..... | 50 |
| 8.17   | Control pilot function controller.....                                                                              | 50 |
| 8.18   | Reliability.....                                                                                                    | 50 |
| 8.19   | Resistance to tracking.....                                                                                         | 50 |
| 8.20   | Electromagnetic compatibility (EMC).....                                                                            | 51 |
| 8.21   | Behaviour of the IC-CPD at low ambient air temperature.....                                                         | 51 |
| 8.22   | Operation with supply failure and hazardous live protective conductor conditions.....                               | 51 |

|        |                                                                                                                                                      |    |
|--------|------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| 8.23   | Verification of a standing current in the protective conductor in normal service .....                                                               | 51 |
| 8.24   | Behaviour at specific environmental conditions .....                                                                                                 | 51 |
| 8.25   | Resistance to vibration and shock .....                                                                                                              | 51 |
| 9      | Tests .....                                                                                                                                          | 52 |
| 9.1    | General .....                                                                                                                                        | 52 |
| 9.1.1  | Opening and closing of contacts .....                                                                                                                | 52 |
| 9.1.2  | Type tests .....                                                                                                                                     | 52 |
| 9.1.3  | Test sequences .....                                                                                                                                 | 53 |
| 9.1.4  | Routine tests .....                                                                                                                                  | 54 |
| 9.2    | Test conditions .....                                                                                                                                | 54 |
| 9.3    | Test of indelibility of marking .....                                                                                                                | 54 |
| 9.4    | Verification of protection against electric shock .....                                                                                              | 55 |
| 9.5    | Test of dielectric properties .....                                                                                                                  | 55 |
| 9.5.1  | Resistance to humidity .....                                                                                                                         | 55 |
| 9.5.2  | Insulation resistance of the main circuit .....                                                                                                      | 56 |
| 9.5.3  | Dielectric strength of the main circuit .....                                                                                                        | 57 |
| 9.5.4  | Secondary circuit of detection transformers .....                                                                                                    | 57 |
| 9.5.5  | Verification of impulse withstand voltages (across clearances and across solid insulation) and of leakage current across open contacts .....         | 57 |
| 9.6    | Temperature-rise test .....                                                                                                                          | 60 |
| 9.6.1  | Test conditions .....                                                                                                                                | 60 |
| 9.6.2  | Test procedure .....                                                                                                                                 | 60 |
| 9.6.3  | Measurement of the temperature rise of different parts .....                                                                                         | 61 |
| 9.6.4  | Temperature rise of a part .....                                                                                                                     | 61 |
| 9.7    | Verification of the operating characteristic .....                                                                                                   | 61 |
| 9.7.1  | General .....                                                                                                                                        | 61 |
| 9.7.2  | Test circuit .....                                                                                                                                   | 61 |
| 9.7.3  | Residual sinusoidal alternating currents tests .....                                                                                                 | 62 |
| 9.7.4  | Verification of the correct operation with residual currents having a d.c. component .....                                                           | 64 |
| 9.7.5  | Verification of behaviour in case of composite residual current .....                                                                                | 65 |
| 9.7.6  | Verification of the correct operation in case of smooth d.c. residual current .....                                                                  | 66 |
| 9.7.7  | Miswiring and supply failure tests .....                                                                                                             | 67 |
| 9.7.8  | Verification of protective conductor contact behaviour .....                                                                                         | 71 |
| 9.7.9  | Verification that the protective conductor is connected to the electric vehicle .....                                                                | 72 |
| 9.7.10 | Verification of standing current in the protective conductor connection in normal service .....                                                      | 72 |
| 9.7.11 | Verification of the correct operation in case of residual direct currents which may result from rectifying circuits supplied from two phases .....   | 72 |
| 9.7.12 | Verification of the correct operation in case of residual direct currents which may result from rectifying circuits supplied from three phases ..... | 73 |
| 9.8    | Verification of mechanical and electrical endurance .....                                                                                            | 73 |
| 9.8.1  | Endurance of plug and vehicle connector part .....                                                                                                   | 73 |
| 9.8.2  | Endurance of the residual current function of the IC-CPD .....                                                                                       | 73 |
| 9.9    | Verification of the behaviour of the IC-CPD under overcurrent conditions .....                                                                       | 75 |
| 9.9.1  | List of the overcurrent tests .....                                                                                                                  | 75 |
| 9.9.2  | Short-circuit tests .....                                                                                                                            | 75 |

|        |                                                                                                                          |    |
|--------|--------------------------------------------------------------------------------------------------------------------------|----|
| 9.9.3  | Verification of the making and breaking capacity of the plug of the IC-CPD .....                                         | 81 |
| 9.10   | Verification of resistance to mechanical shock and impact.....                                                           | 81 |
| 9.10.1 | General .....                                                                                                            | 81 |
| 9.10.2 | Drop test.....                                                                                                           | 81 |
| 9.10.3 | Test for screwed glands of IC-CPDs .....                                                                                 | 82 |
| 9.10.4 | Mechanical strength test on IC-CPDs provided with cords .....                                                            | 82 |
| 9.11   | Test of resistance to heat .....                                                                                         | 82 |
| 9.11.1 | General .....                                                                                                            | 82 |
| 9.11.2 | Temperature test in heating cabinet.....                                                                                 | 82 |
| 9.11.3 | Ball pressure test for insulating material necessary to retain in position current-carrying parts .....                  | 83 |
| 9.11.4 | Ball pressure test for insulating material not necessary to retain in position current-carrying parts .....              | 83 |
| 9.12   | Resistance of insulating material to abnormal heat and to fire .....                                                     | 84 |
| 9.13   | Verification of the self test .....                                                                                      | 84 |
| 9.14   | Verification of the behaviour of IC-CPDs in case of loss of the supply voltage.....                                      | 85 |
| 9.14.1 | Verification of correct operation at the minimum operating voltage ( $U_x$ ) .....                                       | 85 |
| 9.14.2 | Verification of the automatic opening in case of loss of the supply voltage .....                                        | 85 |
| 9.14.3 | Verification of the reclosing function .....                                                                             | 86 |
| 9.15   | Verification of the limiting values of the non-operating current under overcurrent conditions .....                      | 86 |
| 9.16   | Verification of resistance against unwanted tripping due to surge currents to earth resulting from impulse voltages..... | 86 |
| 9.17   | Verification of reliability .....                                                                                        | 86 |
| 9.17.1 | Climatic test.....                                                                                                       | 86 |
| 9.17.2 | Test at a temperature of 45 °C .....                                                                                     | 88 |
| 9.18   | Resistance to ageing.....                                                                                                | 89 |
| 9.19   | Resistance to tracking .....                                                                                             | 89 |
| 9.20   | Test on pins provided with insulating sleeves.....                                                                       | 90 |
| 9.21   | Test of mechanical strength of non-solid pins of plugs.....                                                              | 90 |
| 9.22   | Verification of the effects of strain on the conductors .....                                                            | 90 |
| 9.23   | Checking of the torque exerted by IC-CPDs on fixed socket-outlets .....                                                  | 90 |
| 9.24   | Tests of the cord anchorage .....                                                                                        | 90 |
| 9.25   | Flexing test of non-rewirable IC-CPDs .....                                                                              | 91 |
| 9.26   | Verification of the electromagnetic compatibility (EMC) .....                                                            | 92 |
| 9.27   | Tests replacing verifications of creepage distances and clearances.....                                                  | 93 |
| 9.27.1 | General .....                                                                                                            | 93 |
| 9.27.2 | Abnormal conditions.....                                                                                                 | 93 |
| 9.27.3 | Temperature rise resulting from fault conditions.....                                                                    | 93 |
| 9.28   | Verifications for single electronic components used in IC-CPDs .....                                                     | 94 |
| 9.28.1 | General .....                                                                                                            | 94 |
| 9.28.2 | Capacitors .....                                                                                                         | 94 |
| 9.28.3 | Resistors and inductors.....                                                                                             | 94 |
| 9.29   | Chemical loads .....                                                                                                     | 96 |
| 9.30   | Heat test under solar radiation.....                                                                                     | 96 |
| 9.31   | Resistance to ultra-violet (UV) radiation.....                                                                           | 96 |
| 9.32   | Damp and salt mist test for marine and coastal environments.....                                                         | 97 |
| 9.32.1 | Test for internal metallic parts .....                                                                                   | 97 |

|                       |                                                                                                                                                              |     |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 9.32.2                | Test for external metallic parts only .....                                                                                                                  | 97  |
| 9.32.3                | Test criteria .....                                                                                                                                          | 97  |
| 9.33                  | Hot damp test for tropical environments .....                                                                                                                | 97  |
| 9.34                  | Vehicle drive-over .....                                                                                                                                     | 97  |
| 9.34.1                | General .....                                                                                                                                                | 97  |
| 9.34.2                | Test at crushing force 5 000 N.....                                                                                                                          | 98  |
| 9.34.3                | Test at crushing force 11 000 N.....                                                                                                                         | 98  |
| 9.34.4                | Performance after the tests .....                                                                                                                            | 98  |
| 9.35                  | Low storage temperature test .....                                                                                                                           | 98  |

# INTERNATIONAL ELECTROTECHNICAL COMMISSION

## IN-CABLE CONTROL AND PROTECTION DEVICE FOR MODE 2 CHARGING OF ELECTRIC ROAD VEHICLES (IC-CPD)

### FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 62752 has been prepared by subcommittee 23E: Circuit-breakers and similar equipment for household use, of IEC technical committee 23: Electrical accessories.

The text of this standard is based on the following documents:

|              |                  |
|--------------|------------------|
| FDIS         | Report on voting |
| 23E/919/FDIS | 23E/938/RVD      |

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

In this standard, the following print types are used:

- Requirements proper, in roman type;
- *Test specifications, in italic type;*
- NOTES, in smaller roman type.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

NOTE The attention of National Committees is drawn to the fact that equipment manufacturers and testing organizations may need a transitional period following publication of a new, amended or revised IEC publication in which to make products in accordance with the new requirements and to equip themselves for conducting new or revised tests.

New specific requirements for IC-CPD are provided in comparison to IEC 61851-1:2010, Clause 11, which was applied to IC-CPD before the availability of this standard.

It is the recommendation of the committee that the content of 5.1, 6.1 and 8.8.4, as indicated, of this publication be adopted for implementation nationally at the end of the transitional period, which is 2017-12-31.

## INTRODUCTION

The essential purpose of this standard is safe and reliable access of electric vehicles to a supply system. The definition for mode 2 charging of electric vehicle is described in IEC 61851-1.

For all charging modes, protection against electric shock in case of failure of basic protection and/or fault protection is provided, at least by a type A RCD (see IEC 60364-7-722 and IEC 61851-1).

For mode 2 charging including the situation where it cannot be guaranteed that the installation is equipped with RCDs, for example charging the electric vehicle at an unknown installation, a dedicated protection is used for the connected electric vehicle. The intention of this standard is to describe the relevant requirements for an in-cable control and protection device (IC-CPD) to be used for mode 2 charging.

The IC-CPD is not a protection device for use in fixed installations.

## IN-CABLE CONTROL AND PROTECTION DEVICE FOR MODE 2 CHARGING OF ELECTRIC ROAD VEHICLES (IC-CPD)

### 1 Scope

This International Standard applies to in-cable control and protection devices (IC-CPDs) for mode 2 charging of electric road vehicles, hereafter referred to as IC-CPD including control and safety functions.

This standard applies to portable devices performing simultaneously the functions of detection of the residual current, of comparison of the value of this current with the residual operating value and of opening of the protected circuit when the residual current exceeds this value.

The IC-CPD according to this standard

- has a control pilot function controller in accordance with IEC TS 62763;
- checks supply conditions and prevents charging in case of supply faults under specified conditions;
- may have a switched protective conductor.

These IC-CPDs are intended for use in TN-, and TT-systems.

The use of IC-CPDs in IT systems may be limited.

Residual currents with frequencies different from the rated frequency, d.c. residual currents and specific environmental situation are considered.

This standard is applicable to IC-CPDs performing the safety and control functions as required in IEC 61851-1 for mode 2 charging of electric vehicles.

This standard is applicable to IC-CPDs for single-phase circuits not exceeding 250 V or multi-phase circuits not exceeding 480 V, their maximum rated current being 32 A.

NOTE 1 In Denmark, the following additional requirement applies: for IC-CPDs supplied with a plug for household and similar use the maximum charging current is 8 A, if the charging cycle can exceed 2 h.

NOTE 2 In Finland, the following additional requirement applies: for IC-CPDs supplied with a plug for household and similar use the maximum charging current is 8 A for long lasting charging.

This standard is applicable to IC-CPDs to be used in a.c. circuits only, with preferred values of rated frequency 50 Hz, 60 Hz or 50/60 Hz. IC-CPDs according to this standard are not intended to be used to supply electric energy towards the connected grid.

This standard is applicable to IC-CPDs having a rated residual operating current not exceeding 30 mA and are intended to provide additional protection for the circuit downstream of the IC-CPD in situations where it cannot be guaranteed that the installation is equipped with an RCD with  $I_{\Delta n} \leq 30$  mA.

The IC-CPD consists of:

- a plug for connection to a socket-outlet in the fixed installation;
- one or more subassemblies containing the control and protection features;
- a cable between the plug and the subassemblies (optional);

- a cable between the subassemblies and the vehicle connector (optional);
- a vehicle connector for connection to the electric vehicle.

For plugs for household and similar use the respective requirements of the national standard and specific requirements defined by the national committee of the country where the product is placed on the market apply. If no national requirements exist, IEC 60884-1 may be used. For industrial plugs IEC 60309-2 applies. For specific applications and areas non interchangeable industrial plugs may be used. In this case IEC 60309-1 applies

NOTE 3 In Denmark: the requirements in this standard cannot replace or change any part of the Danish National requirements for plugs for household and similar use according to DS 60884-2-D1.

Plugs, connectors and cables which are part of the IC-CPD are not tested according to this standard. These parts are tested separately according to their specific product standard.

NOTE 4 In the following countries, requirements for EV (mode 2) Cord Sets are covered by NMX-J 677-ANCE-2013/ CSA C22.2 No. 280-13/ UL 2594: Standard for Electric Vehicle Supply Equipment: US, CA, MX.

The switching contacts of the IC-CPD are not required to provide isolation, as isolation can be ensured by disconnecting the plug.

The IC-CPD may have a non-replaceable integral fuse in the phase(s) and/or neutral current path.

## 2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60309-1:1999/AMD2:2012

IEC 60309-2, *Plugs, socket-outlets and couplers for industrial purposes – Part 2: Dimensional interchangeability requirements for pin and contact-tube accessories*

IEC 60364-4-44:2007, *Low-voltage electrical installations – Part 4-44: Protection for safety – Protection against voltage disturbances and electromagnetic disturbances*

IEC 60384-14 (all parts), *Fixed capacitors for use in electronic equipment – Part 14: Sectional specification – Fixed capacitors for electromagnetic interference suppression and connection to the supply mains*

IEC 60417, *Graphical symbols for use on equipment* (available at: <http://www.graphical-symbols.info/equipment>)

IEC 60529:1989, *Degrees of protection provided by enclosures (IP Code)*

IEC 60664-1:2007, *Insulation coordination for equipment within low-voltage systems – Part 1: Principles, requirements and tests*

IEC 60664-3, *Insulation coordination for equipment within low-voltage systems – Part 3: Use of coating, potting or moulding for protection against pollution*

IEC 60695-2-10, *Fire hazard testing – Part 2-10: Glowing/hot-wire based test methods – Glow-wire apparatus and common test procedure*

IEC 60695-2-11, *Fire hazard testing – Part 2-11: Glowing/hot-wire based test methods – Glow-wire flammability test method for end-products (GWEPT)*

IEC 60884-1:2002, *Plugs and socket-outlets for household and similar purposes – Part 1: General requirements*<sup>1</sup>

IEC 60884-1:2002/AMD1:2006

IEC 60884-1:2002/AMD2:2013

IEC 61249-2 (all parts), *Materials for printed boards and other interconnecting structures*

IEC 61540, *Electrical accessories – Portable residual current devices without integral overcurrent protection for household and similar use (PRCDs)*

---

<sup>1</sup> A consolidated edition (3.2) exists including IEC 60884-1 (2002) and its Amendment 1 (2006) and Amendment 2 (2013).

IEC 61543:1995, *Residual current-operated protective devices (RCDs) for household and similar use – Electromagnetic compatibility*

IEC 61543:1995/AMD1:2004

IEC 61543:1995/AMD2:2005

IEC 61851-1:2010, *Electric vehicle conductive charging system – Part 1: General requirements*

IEC 62196-1, *Plugs, socket-outlets, vehicle connectors and vehicle inlets – Conductive charging of electric vehicles – Part 1: General requirements*

IEC 62196-2, *Plugs, socket-outlets, vehicle connectors and vehicle inlets – Conductive charging of electric vehicles – Part 2: Dimensional compatibility and interchangeability requirements for a.c. pin and contact-tube accessories*

IEC TS 62763:2013, *Pilot function through a control pilot circuit using PWM (pulse width modulation) and a control pilot wire*

CISPR 14 (all parts), *Electromagnetic compatibility – Requirements for household appliances, electric tools and similar apparatus*

ISO 178, *Plastics – Determination of flexural properties*

ISO 179 (all parts), *Plastics – Determination of Charpy impact properties*

ISO 179-1, *Plastics – Determination of Charpy impact properties – Part 1: Non-instrumented impact test*

ISO 2409, *Paints and varnishes – Cross-cut test*

ISO 4628-3, *Paints and varnishes – Evaluation of degradation of coatings – Designation of quantity and size of defects, and of intensity of uniform changes in appearance – Part 3: Assessment of degree of rusting*

ISO 4892-2:2013, *Plastics – Methods of exposure to laboratory light sources – Part 2: Xenon-arc lamps*

ISO 16750-5:2010, *Road vehicles – Environmental conditions and testing for electrical and electronic equipment – Part 5: Chemical loads*

ISO 17409:2015, *Electrically propelled road vehicles – Connection to an external electric power supply – Safety requirements*

### **3 Terms and definitions**

For the purposes of this document, the following terms and definitions apply.

NOTE 1 Where the terms "voltage" and "current" are used, they imply r.m.s. values, unless otherwise specified.

NOTE 2 Throughout this standard, the word "earthing" is used for "protective earthing".

NOTE 3 The term "accessory" is used as a general term covering plugs, socket-outlets, vehicle connectors and vehicle couplers.
