ISO 8116-3

> Second edition 1995-09-15

Textile machinery and accessories — Beams for winding —

Part 3:

Weaver's beams

Matériel pour l'industrie textile — Ensouples pour enroulement — Partie 3: Ensouples de tissage

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote

International Standard ISO 8116-3 was prepared by Technical Committee ISO/TC 72. Textile machinery and allied machinery and accessories. Subcommittee SC 2. Winding and preparatory machinery for fabric manufacture.

This second edition of ISO 8116-3 cancels and replaces ISO 6175:1983 and ISO 8116-3:1986, which have been technically revised.

ISO 8116 consists of the following parts, under the general title Textile machinery and accessories — Beams for winding:

- Part 1: General vocabulary
- Part 2: Warper's beams
- Part 3: Weaver's beams
- – Part 4: Quality classification of flanges for weaver's beams, warper's beams and sectional beams
- Part 5: Sectional beams for warp knitting machines
- Part 6: Beams for ribbon weaving and ribbon knitting
- Part 7: Beams for dyeing slivers, rovings and yarns

Textile machinery and accessories — Beams for winding —

Part 3:

Weaver's beams

1 Scope

This part of ISO 8116 defines the basic terms and lays down the main dimensions and the variations in form and position for weaver's beams that are used for weaving preparation as well as for weaving. Furthermore the main dimensions of the profile threads for weaver's beams are given.

2 Normative references

The following standards contain provisions which, through reference in this text, constitute provisions of this part of ISO 8116. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this part of ISO 8116 are encouraged to investigate the possibility of applying the most recent editions of the standards indicated below. Members of IEC and ISO maintain registers of currently valid International Standards.

ISO 109:1982, Textile machinery — Working widths of weaving machines.

ISO 286-2:1988, ISO system of limits and fits — Part 2: Tables of standard tolerance grades and limit deviations for holes and shafts.

ISO 8116-8:1995, Textile machinery and accessories — Beams for winding — Part 8: Definitions of run-out tolerances and methods of measurement.

3 Terminology and main dimensions

(See figures 1 and 2 and table 1)

- d_1 flange diameter
- d_2 barrel diameter
- d_3 shaft diameter
- d_4 driving hole diameter
- d_5 diameter between driving hole centres
- l_1 barrel length including end plates
