About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

IEC Catalogue - webstore.iec.ch/catalogue

The stand-alone application for consulting the entire bibliographical information on IEC International Standards, Technical Specifications, Technical Reports and other documents. Available for PC, Mac OS, Android Tablets and iPad.

IEC publications search - www.iec.ch/searchpub

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and also once a month by email.

Electropedia - www.electropedia.org

The world's leading online dictionary of electronic and electrical terms containing 20 000 terms and definitions in English and French, with equivalent terms in 15 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary

65 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: csc@iec.ch.

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Catalogue IEC - webstore.iec.ch/catalogue

Application autonome pour consulter tous les renseignements bibliographiques sur les Normes internationales, Spécifications techniques, Rapports techniques et autres documents de l'IEC. Disponible pour PC, Mac OS, tablettes Android et iPad.

Recherche de publications IEC - www.iec.ch/searchpub

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études,...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et aussi une fois par mois par email.

Electropedia - www.electropedia.org

Le premier dictionnaire en ligne de termes électroniques et électriques. Il contient 20 000 termes et définitions en anglais et en français, ainsi que les termes équivalents dans 15 langues additionnelles. Egalelement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

Glossaire IEC - std.iec.ch/glossary

65 000 entrées terminologiques électrotechniques, en anglais et en français, extraites des articles Termes et Définitions des publications IEC parues depuis 2002. Plus certaines entrées antérieures extraites des publications des CE 37, 77, 86 et CISPR de l'IEC.

Service Clients - webstore.iec.ch/csc

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: csc@iec.ch.

CONTENTS

FOREWORD.....	12
0 Introduction	14
0.1 General.....	14
0.2 Patent declaration	16
1 Scope.....	17
2 Normative references	17
3 Terms, definitions, symbols, abbreviated terms and conventions	19
3.1 Terms and definitions	19
3.1.1 Common terms and definitions	19
3.1.2 CPF 2: Additional terms and definitions	24
3.2 Symbols and abbreviated terms.....	24
3.2.1 Common symbols and abbreviated terms.....	24
3.2.2 CPF 2: Additional symbols and abbreviated terms.....	25
3.3 Conventions.....	26
4 Overview of FSCP 2/1 (CIP Safety™).....	26
4.1 General.....	26
4.2 FSCP 2/1.....	26
5 General	27
5.1 External documents providing specifications for the profile	27
5.2 Safety functional requirements	28
5.3 Safety measures	28
5.4 Safety communication layer structure	29
5.5 Relationships with FAL (and DLL, PhL).....	30
5.5.1 General	30
5.5.2 Data types	30
6 Safety communication layer services.....	30
6.1 Introduction.....	30
6.2 Connection object	31
6.2.1 General	31
6.2.2 Class attribute extensions	31
6.2.3 Service extensions.....	31
6.2.4 Explicit message response format for SafetyOpen and SafetyClose	32
6.3 Connection Manager object.....	32
6.3.1 General	32
6.3.2 ForwardOpen for safety.....	33
6.3.3 Safety network segment	35
6.3.4 Originator rules for calculating the connection parameter CRC	38
6.3.5 SafetyOpen processing flowcharts.....	38
6.3.6 Checks required by Multipoint producers with existing connections	41
6.3.7 Electronic key usage for safety.....	42
6.3.8 RPI vs. API in safety connections	42
6.3.9 Application path construction for safety	42
6.3.10 Safety Validator connection types.....	43
6.3.11 Application reply data in a successful SafetyOpen response	46
6.3.12 Unsuccessful SafetyOpen response	48
6.3.13 ForwardClose for safety	50

6.4	Identity object	50
6.4.1	General	50
6.4.2	Changes to common services	50
6.4.3	Extensions for CP 16/3 devices	51
6.5	Link objects	51
6.5.1	DeviceNet object changes	51
6.5.2	TCP/IP Interface object changes	52
6.5.3	SERCOS III Link object	52
6.6	Safety Supervisor object.....	53
6.6.1	General	53
6.6.2	Safety Supervisor class attributes.....	54
6.6.3	Subclasses	54
6.6.4	Safety Supervisor instance attributes.....	54
6.6.5	Semantics.....	58
6.6.6	Subclasses	64
6.6.7	Safety Supervisor common services	64
6.6.8	Safety Supervisor behavior	75
6.7	Safety Validator object	82
6.7.1	General	82
6.7.2	Class attributes.....	82
6.7.3	Instance attributes	83
6.7.4	Class services	88
6.7.5	Instance services	89
6.7.6	Object behavior.....	89
6.8	Connection Configuration Object	92
6.8.1	General	92
6.8.2	Class attribute extensions	92
6.8.3	Instance attributes, additions and extensions.....	92
6.8.4	Instance attribute semantics extensions or restrictions for safety.....	95
6.8.5	Special Safety Related Parameters – (Attribute 13).....	99
6.8.6	Object-specific services	105
6.8.7	Common service extensions for safety.....	105
6.8.8	Object behavior.....	107
7	Safety communication layer protocol	108
7.1	Safety PDU format	108
7.1.1	Safety PDU encoding	108
7.1.2	Safety CRC.....	120
7.2	Communication protocol behavior.....	121
7.2.1	Sequence of safety checks.....	121
7.2.2	Connection termination	121
7.2.3	Cross checking error	121
7.3	Time stamp operation.....	122
7.4	Rollover counts in the EF	123
7.5	Protocol sequence diagrams	123
7.5.1	General	123
7.5.2	Normal safety transmission	123
7.5.3	Lost, corrupted and delayed message transmission	124
7.5.4	Lost, corrupted or delayed message transmission with production repeated	127

7.5.5	Point-to-point ping.....	129
7.5.6	Multipoint ping on CP 2/3 Safety.....	130
7.5.7	Multipoint ping on CP 2/2 safety networks	131
7.5.8	Multipoint ping – retry with success	132
7.5.9	Multipoint ping – retry with timeout	133
7.6	Safety protocol definition	134
7.6.1	General	134
7.6.2	High level view of a safety device	134
7.6.3	Safety Validator object	134
7.6.4	Relationship between SafetyValidatorServer and SafetyValidatorClient	135
7.6.5	Extended Format time stamp rollover handling.....	135
7.6.6	SafetyValidatorClient function definition.....	140
7.6.7	SafetyValidatorServer function definition	148
7.7	Safety message and protocol data specifications	161
7.7.1	Mode octet	161
7.7.2	Time Stamp Section.....	162
7.7.3	Time Coordination Message	162
7.7.4	Time correction message	163
7.7.5	Safety data production.....	163
7.7.6	Producer dynamic variables	171
7.7.7	Producer per consumer dynamic variables.....	173
7.7.8	Consumer data variables.....	174
7.7.9	Consumer input static variables.....	176
7.7.10	Consumer dynamic variables.....	177
8	Safety communication layer management.....	179
8.1	Overview	179
8.2	Definition of the measures used during connection establishment	179
8.3	Originator-Target relationship validation	183
8.4	Detection of mis-routed connection requests.....	183
8.5	SafetyOpen processing	184
8.6	Ownership management.....	184
8.7	Bridging different physical layers	185
8.8	Safety connection establishment	187
8.8.1	Overview	187
8.8.2	Basic facts for connection establishment	187
8.8.3	Configuring safety connections.....	187
8.8.4	Network time expectation multiplier	189
8.8.5	Establishing connections	190
8.8.6	Recommendations for consumer number allocation.....	193
8.8.7	Recommendations for connection establishment.....	194
8.8.8	Ownership establishment	194
8.8.9	Ownership use cases	195
8.8.10	PID/CID usage and establishment	198
8.8.11	Proper PID/CID usage in multipoint and point-to-point connections	198
8.8.12	Network supported services	200
8.8.13	FSCP 2/1 safety device type	201
8.9	Safety configuration process	205
8.9.1	Introduction to safety configuration	205
8.9.2	Configuration goals	205

8.9.3	Configuration overview	206
8.9.4	User configuration guidelines	207
8.9.5	Configuration process SIL3 justification	208
8.9.6	Device functions for tool configuration	209
8.9.7	Password security	209
8.9.8	SNCT interface services	209
8.9.9	Configuration lock	209
8.9.10	Effect of configuration lock on device behavior	210
8.9.11	Configuration ownership	211
8.9.12	Configuration mode	211
8.9.13	Measures used to ensure integrity of configuration process	211
8.9.14	Download process	213
8.9.15	Verification process	216
8.9.16	Verification process	218
8.9.17	Configuration error analysis	219
8.10	Electronic Data Sheets extensions for safety	223
8.10.1	General rules for EDS based safety devices	223
8.10.2	EDS extensions for safety	224
8.11	Requirements for CP 2/2	229
8.11.1	EPI rules for safety messages that travel over CP 2/2	229
8.11.2	Default safety I/O service	229
8.11.3	Duplicate IP detection	229
8.11.4	Priority for safety connections	229
8.12	Requirements for CP 2/3	230
8.12.1	Allocation of CP 2/3 identifiers	230
8.12.2	Additional requirements	232
8.13	CP 16/3 requirements	232
8.13.1	General architecture for CPF 2 on CP 16/3	232
8.13.2	Baseline FSCP 2/1 on CP 16/3 device	233
8.13.3	Supported objects and services in CP 16/3 devices	234
8.13.4	Transport layer requirements	234
8.13.5	FSCP 2/1 and the CP 16/3 device model	237
8.13.6	UNID assignment on CP 16/3	238
9	System requirements	241
9.1	Indicators and switches	241
9.1.1	General indicator requirements	241
9.1.2	LED indications for setting the device UNID	241
9.1.3	Module Status LED	241
9.1.4	Indicator warning	242
9.1.5	Network Status LED	242
9.1.6	Switches	243
9.2	Installation guidelines	245
9.3	Safety function response time	246
9.3.1	Overview	246
9.3.2	Network time expectation	246
9.3.3	Equations for calculating network reaction times	247
9.4	Duration of demands	249
9.5	Constraints for calculation of system characteristics	249
9.5.1	Number of nodes	249

9.5.2	Network PFH	249
9.5.3	Bit Error Rate (BER)	252
9.6	Maintenance	253
9.7	Safety manual	253
10	Assessment	253

Annex A (informative) Additional information for functional safety communication profiles of CPF 2 254

A.1	Hash function example code	254
A.2	268

Annex B (informative) Information for assessment of the functional safety communication profiles of CPF 2 269

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**INDUSTRIAL COMMUNICATION NETWORKS –
PROFILES –****Part 3-2: Functional safety fieldbuses –
Additional specifications for CPF 2****FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61784-3-2 has been prepared by subcommittee 65C: Industrial networks, of IEC technical committee 65: Industrial-process measurement, control and automation.

This third edition cancels and replaces the second edition published in 2010. This edition constitutes a technical revision. The main changes with respect to the previous edition are listed below (and highlighted in yellow in this document).

- Added detailed requirements for use of FSCP 2/1 in conjunction with CP 16/3 (see 4.1, 6.4.3, 6.5.3, 8.2, 8.13, and miscellaneous references when referencing CPF 2 networks);
- Defined object class section keywords for safety to EDS file definition in 8.10.2.1;
- New sections on safety CRC overview in 7.1.2.1 and Rollover counts for EF format in 7.4;
- Corrections to PFH calculations in 9.5.2;

- Change from MACID to NodeID as general reference to network identifier;
- Miscellaneous minor corrections made since the last publication.

The text of this standard is based on the following documents:

FDIS	Report on voting
65C/851/FDIS	65C/854/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts of the IEC 61784-3 series, published under the general title *Industrial communication networks – Profiles – Functional safety fieldbuses*, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

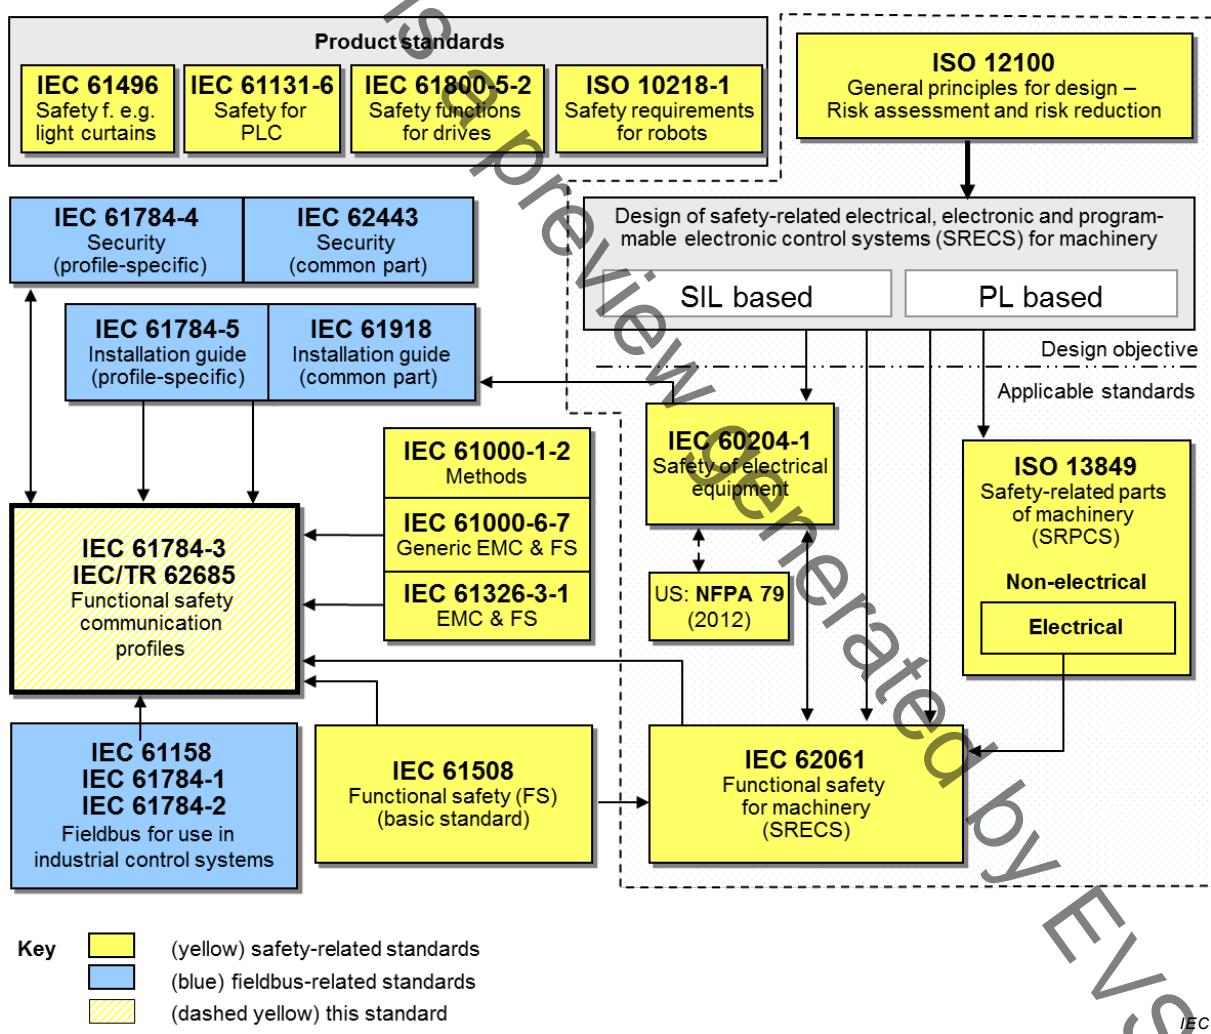

0 Introduction

0.1 General

The IEC 61158 fieldbus standard together with its companion standards IEC 61784-1 and IEC 61784-2 defines a set of communication protocols that enable distributed control of automation applications. Fieldbus technology is now considered well accepted and well proven. Thus fieldbus enhancements continue to emerge, addressing applications for areas such as real time, safety-related and security-related applications.

This standard explains the relevant principles for functional safety communications with reference to IEC 61508 series and specifies several safety communication layers (profiles and corresponding protocols) based on the communication profiles and protocol layers of IEC 61784-1, IEC 61784-2 and the IEC 61158 series. It does not cover electrical safety and intrinsic safety aspects.

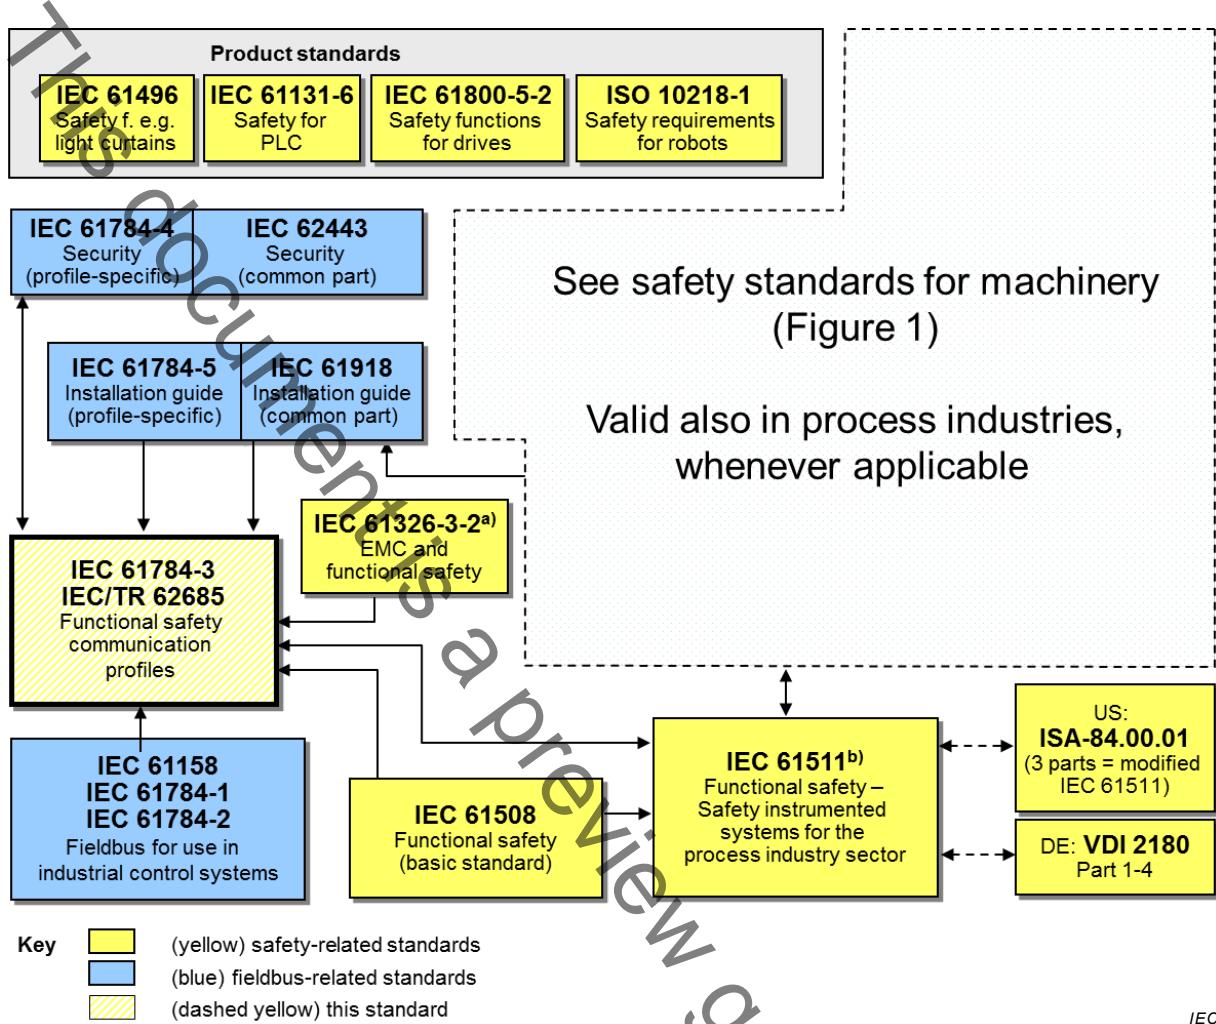

Figure 1 shows the relationships between this standard and relevant safety and fieldbus standards in a machinery environment.

NOTE Subclauses 6.7.6.4 (high complexity) and 6.7.8.1.6 (low complexity) of IEC 62061 specify the relationship between PL (Category) and SIL.

Figure 1 – Relationships of IEC 61784-3 with other standards (machinery)

Figure 2 shows the relationships between this standard and relevant safety and fieldbus standards in a process environment.

^a For specified electromagnetic environments; otherwise IEC 61326-3-1 or IEC 61000-6-7.

^b EN ratified.

Figure 2 – Relationships of IEC 61784-3 with other standards (process)

Safety communication layers which are implemented as parts of safety-related systems according to IEC 61508 series provide the necessary confidence in the transportation of messages (information) between two or more participants on a fieldbus in a safety-related system, or sufficient confidence of safe behaviour in the event of fieldbus errors or failures.

Safety communication layers specified in this standard do this in such a way that a fieldbus can be used for applications requiring functional safety up to the Safety Integrity Level (SIL) specified by its corresponding functional safety communication profile.

The resulting SIL claim of a system depends on the implementation of the selected functional safety communication profile (FSCP) within this system – implementation of a functional safety communication profile in a standard device is not sufficient to qualify it as a safety device.

This standard describes:

- basic principles for implementing the requirements of IEC 61508 series for safety-related data communications, including possible transmission faults, remedial measures and considerations affecting data integrity;
- functional safety communication profiles for several communication profile families in IEC 61784-1 and IEC 61784-2, including safety layer extensions to the communication service and protocols sections of the IEC 61158 series.

0.2 Patent declaration

The International Electrotechnical Commission (IEC) draws attention to the fact that it is claimed that compliance with this document may involve the use of patents concerning the functional safety communication profiles for family 2 as follows, where the [xx] notation indicates the holder of the patent rights:

US 6,631,476	[RA]	Safety network for industrial controller providing redundant connections on single media
US 6,701,198	[RA]	Safety network for industrial controller allowing initialization on standard networks
US 6,721,900	[RA]	Safety network for industrial controller having reduced bandwidth requirements
US 6,891,850	[RA]	Network independent safety protocol for industrial controller
US 6,915,444	[RA]	Network independent safety protocol for industrial controller using data manipulation techniques

IEC takes no position concerning the evidence, validity and scope of these patent rights.

The holder of these patent rights has assured the IEC that he/she is willing to negotiate licences either free of charge or under reasonable and non-discriminatory terms and conditions with applicants throughout the world. In this respect, the statement of the holder of these patent rights is registered with IEC.

Information may be obtained from:

[RA] Rockwell Automation, Inc.
1201 S. Second Street
Milwaukee, WI 53204
USA
Attention: Intellectual Property Dept.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights other than those identified above. IEC shall not be held responsible for identifying any or all such patent rights.

ISO (www.iso.org/patents) and IEC (<http://patents.iec.ch>) maintain on-line data bases of patents relevant to their standards. Users are encouraged to consult the data bases for the most up to date information concerning patents.

INDUSTRIAL COMMUNICATION NETWORKS – PROFILES –

Part 3-2: Functional safety fieldbuses – Additional specifications for CPF 2

1 Scope

This part of the IEC 61784-3 series specifies a safety communication layer (services and protocol) based on CPF 2 of IEC 61784-1, IEC 61784-2 and IEC 61158 Type 2. It identifies the principles for functional safety communications defined in IEC 61784-3 that are relevant for this safety communication layer. This safety communication layer is intended for implementation in safety devices only.

NOTE 1 It does not cover electrical safety and intrinsic safety aspects. Electrical safety relates to hazards such as electrical shock. Intrinsic safety relates to hazards associated with potentially explosive atmospheres.

This part¹ defines mechanisms for the transmission of safety-relevant messages among participants within a distributed network using fieldbus technology in accordance with the requirements of IEC 61508 series² for functional safety. These mechanisms may be used in various industrial applications such as process control, manufacturing automation and machinery.

This part provides guidelines for both developers and assessors of compliant devices and systems.

NOTE 2 The resulting SIL claim of a system depends on the implementation of the selected functional safety communication profile within this system – implementation of a functional safety communication profile according to this part in a standard device is not sufficient to qualify it as a safety device.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3 Terms, definitions, symbols, abbreviated terms and conventions

3.1 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

NOTE Italics are used in the definitions to highlight terms which are themselves defined in 3.1.

3.1.1 Common terms and definitions

NOTE These common terms and definitions are inherited from IEC 61784-3:—.

3.1.1.1 availability

probability for an automated system that for a given period of time there are no unsatisfactory system conditions such as loss of production

3.1.1.2 bit error probability

Pe

probability for a given bit to be received with the incorrect value

3.1.1.3 black channel

black channel

defined communication system containing one or more elements without evidence of design or validation according to IEC 61508

Note 1 to entry: This definition expands the usual meaning of channel to include the system that contains the channel.

3.1.1.4 bridge

bridge

abstract device that connects multiple network segments along the data link layer

3.1.1.5 closed communication system

fixed number or fixed maximum number of participants linked by a *communication system* with well-known and fixed properties, and where the *risk* of unauthorized access is considered negligible

[SOURCE: IEC 62280:2014, 3.1.6, modified – transmission replaced by communication]

3.1.1.6 communication channel

logical connection between two end-points within a *communication system*

3.1.1.7 communication system

arrangement of hardware, software and propagation media to allow the transfer of messages (ISO/IEC 7498-1 application layer) from one application to another

3.1.1.8 connection

logical binding between two application objects within the same or different devices
