## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2. [www.iso.org/directives](http://www.iso.org/directives)

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received. Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

The committee responsible for this document is ISO/TC 23, *Tractors and machinery for agriculture and forestry*, Subcommittee SC 2, *Common tests*.

This second edition cancels and replaces the first edition (ISO 3776-2:2007), which has been technically revised for the technical harmonization with those sections of OECD Code 4: July 2012, OECD Code 6: July 2012, and OECD Code 7: July 2012 relating to seat belt anchorage strength testing.

ISO 3776 consists of the following parts, under the general title *Tractors and machinery for agriculture — Seat belts*:

- *Part 1: Anchorage location requirements*
- *Part 2: Anchorage strength requirements*
- *Part 3: Requirements for assemblies*

## Introduction

Seat belts are used on agricultural machinery to restrain the operator in the seat during normal operation and use. When used on agricultural tractors, seat belts also serve to restrain the operator within the protective zone of the protective structure in the event of an upset. This part of ISO 3776 specifies the minimum seat belt anchorage strength requirements to meet these purposes.

This part of ISO 3776 specifies technical performance requirements, associated test procedures, and performance test report information. Technical harmonization with OECD is ensured by the Maintenance Agency operating as specified in [Annex B](#).
