Foreword ..... **vi**
Introduction ..... **vii**
1 Scope **1**
2 Normative references **1**
3 Terms and definitions **2**
4 Abbreviated terms **9**
5 General description (informative) **11**
5.1 Overview 11
5.2 Functional model 11
5.2.1 Description 11
5.2.2 Architecture 13
5.2.3 Message interactions 15
5.2.4 Common operational assumptions 15
5.3 Safety use cases 16
5.3.1 Intent 16
5.3.2 Additional assumptions 17
5.3.3 Architecture implications 17
5.4 Mobility/sustainability use cases 17
5.4.1 Intent 17
5.4.2 Additional assumptions 18
5.4.3 Architecture implications 18
5.5 Priority/pre-emption use cases 18
5.5.1 Intent 18
5.5.2 Additional assumptions 20
5.5.3 Architecture implications 20
5.5.4 Public transport signal priority application 21
5.5.5 Freight vehicle signal priority application 22
5.5.6 Emergency (public safety) vehicle pre-emption application 23
6 Function description (informative) **24**
6.1 Public safety vehicle 24
6.1.1 Broadcast public safety vehicle information 24
6.1.2 Broadcast emergency response indication 24
6.2 Signal pre-emption 24
6.2.1 Signal pre-empt request (normal power) 25
6.2.2 Signal pre-empt request (high power) 25
6.2.3 Request signal pre-empt — Message identifier 25
6.2.4 Request signal pre-empt — Intersection identifier 25
6.2.5 Request signal pre-empt — Approach lane 25
6.2.6 Request signal pre-empt — Egress lane 26
6.2.7 Request signal pre-empt — Vehicle class 26
6.2.8 Request signal pre-empt — Time of service 26
6.2.9 Request signal pre-empt — Vehicle identity 26
6.2.10 Request signal pre-empt — Vehicle location and speed 26
6.2.11 Request signal pre-empt — Cancellation 26
6.2.12 Request signal pre-empt — Transaction identifier 27
6.2.13 Request signal pre-empt — Duration 27
6.3 Public transport and commercial vehicle 27
6.3.1 Broadcast priority requesting vehicle information 27
6.4 Signal priority requirements 27
6.4.1 Signal priority request 27
6.4.2 Request signal priority — Message identifier 27
6.4.3 Request signal priority — Intersection identifier 28

6.4.4 Request signal priority — Approach lane 28
6.4.5 Request signal priority — Egress lane 28
6.4.6 Request signal priority — Vehicle class 28
6.4.7 Request signal priority — Time of service 28
6.4.8 Request signal priority — Vehicle identity 28
6.4.9 Request signal priority — Vehicle location and speed 29
6.4.10 Request signal priority — Service information 29
6.4.11 Request signal priority cancellation 29
6.4.12 Request signal priority — Priority request level 29
6.4.13 Request signal priority — Transaction identifier 29
6.4.14 Request signal priority — Duration 29
6.4.15 Request signal priority — Transit schedule 29
6.5 Broadcast area's geometrics 30
6.5.1 Broadcast roadway geometrics 30
6.5.2 Broadcast roadway geometrics — Message identifier 30
6.5.3 Broadcast intersection — Identifier 30
6.5.4 Broadcast intersection — Reference point 30
6.5.5 Broadcast intersection — Lane/approach default width 30
6.5.6 Broadcast intersection — Egress lanes/approach 30
6.5.7 Broadcast intersection — Ingress lanes/approach 31
6.5.8 Broadcast intersection — Lane/approach number 31
6.5.9 Broadcast intersection — Lane/approach centerline coordinates 31
6.5.10 Broadcast intersection — Vehicle lane/approach manoeuvres 31
6.5.11 Broadcast intersection — Pedestrian crossing lane/approach manoeuvres 32
6.5.12 Broadcast intersection — Special lane/approach manoeuvres 32
6.5.13 Broadcast intersection — Version identifier 32
6.5.14 Broadcast intersection — Crossings 32
6.5.15 Broadcast intersection — Lane/approach width 33
6.5.16 Broadcast intersection — Node lane/approach width 33
6.5.17 Broadcast intersection — Egress connection 33
6.5.18 Broadcast intersection — Traffic control 33
6.5.19 Broadcast intersection — Traffic control by lane/approach 33
6.5.20 Broadcast road conditions 33
6.5.21 Broadcast intersection — Signal group 34
6.6 Broadcast GNSS augmentation details 34
6.6.1 Broadcast GNSS augmentations 34
6.6.2 Broadcast GNSS augmentation detail — NMEA 34
6.6.3 Broadcast GNSS augmentation detail — RTCM 34
6.7 Signalized intersection requirements 34
6.7.1 Broadcast signal phase and timing information 34
6.7.2 Broadcast signal phase and timing — Message identifier 35
6.7.3 Broadcast signal phase and timing — Intersection identifier 35
6.7.4 Broadcast signal phase and timing — Intersection status 35
6.7.5 Broadcast signal phase and timing — Timestamp 35
6.7.6 Broadcast manoeuvre — Signal group 35
6.7.7 Broadcast manoeuvre — Manoeuvre state 35
6.7.8 Broadcast manoeuvre — Vehicular state 35
6.7.9 Broadcast manoeuvre — Pedestrian state 35
6.7.10 Broadcast manoeuvre — Special state 36
6.7.11 Broadcast manoeuvre — Time of change — Minimum 36
6.7.12 Broadcast manoeuvre — Time of change — Maximum 36
6.7.13 Broadcast manoeuvre — Succeeding signal indications 36
6.7.14 Broadcast manoeuvre — Succeeding signal indication time of change 37
6.7.15 Broadcast manoeuvre pending manoeuvre start time 37
6.7.16 Broadcast manoeuvre — Pedestrian detect 37
6.7.17 Broadcast manoeuvre — Pedestrian call 37
6.7.18 Broadcast manoeuvre — Optimal speed information 38
6.7.19 Broadcast manoeuvre — Signal progression information 38

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

The committee responsible for this document is ISO/TC 204, *Intelligent transport systems*.

Introduction

Cooperative-ITS (C-ITS) is a promising and remarkable advancement of intelligent transport systems (ITS). Numerous cooperative applications are specified that open up new possibilities to make traffic safer, more efficient, and smarter. Technologies are developed and improved to realize and support those new services and applications. To enable those applications, information needs to be reliably communicated between the stationary infrastructure and mobile vehicles.

This document describes the use cases for several applications that address safety, mobility, and ecological sustainability. Each use case has information needs that communication between vehicles and the infrastructure facilitate. It then identifies the information needs for the applications and the requirements to satisfy them. In turn, it maps the requirements into data frames and data elements to fulfil the requirements within the specified message set.

ISO 22951 has a relationship to this document. PRESTO addresses its user needs through the implementation of a specific system architecture similar to that described in NTCIP 1211. This architecture includes traffic signals, message signs, routing systems, human machine interfaces, and fixed detection locations. Many of PRESTO's data value details are "left undefined to allow for discretional definition by each country." The PRESTO architecture detects priority requesting vehicles by installing specific detection equipment at these locations.

This document uses a similar set of user needs to develop the message set between vehicles and the roadside equipment they interface. This document does not address the system architecture other than data needed to fulfil the user needs that will be managed elsewhere in the architecture. It details data values and structures in order to define the interface between these two devices. Routing information is supported in the architecture through other mechanisms and is not a need supported by the vehicle to roadside equipment information flows. The user needs also provide for priority by approach, a preconfigured strategy, and ingress/egress lane requests. This document is based on vehicles periodically broadcasting their location and trajectory information to other vehicles and the roadside infrastructure. This document compliments ISO 22951 as it provides for vehicle location and request information directly from connected vehicles rather than the detection of the vehicles from other fixed sensing equipment. It does not address the architecture data flows and operations that are detailed within ISO 22951. In other terms, this document provides a connected vehicle alternative for request and status communication without impacting the back office or local intersection operations of priority management.

Intelligent transport systems — Cooperative ITS — Using V2I and I2V communications for applications related to signalized intersections

This document is a preview generated by EVS

1 Scope

This document defines the message, data structures, and data elements to support exchanges between the roadside equipment and vehicles to address applications to improve safety, mobility and environmental efficiency. In order to verify that the defined messages will satisfy these applications, a systems engineering process has been employed that traces use cases to requirements and requirements to messages and data concepts.

This document consists of a single document that contains the base specification and a series of annexes. The base specification lists the derived information requirements (labelled informative) and references to other standards for message definitions where available. Annex A contains descriptions of the use cases addressed by this document. Annex B and Annex C contain traceability matrices that relate use cases to requirements and requirements to the message definitions (i.e. data frames and data elements). The next annexes list the base message requirements and application-oriented specific requirements (requirements traceability matrix) that map to the message and data concepts to be implemented. As such, an implementation consists of the base plus an additional group of extensions within this document.

Details on information requirements, for other than SPaT, MAP, SSM, and SRM messages are provided in other International Standards. The focus of this document is to specify the details of the SPaT, MAP, SSM, and SRM supporting the use cases defined in this document. Adoption of these messages varies by region and their adoption may occur over a significant time period.

This document covers the interface between roadside equipment and vehicles. Applications, their internal algorithms, and the logical distribution of application functionality over any specific system architecture are outside the scope of this document.
