Paper and board intended to come into contact with foodstuffs - Determination of the transfer of antimicrobial constituents

#### EESTI STANDARDI EESSÕNA

#### NATIONAL FOREWORD

See Eesti standard EVS-EN 1104:2018 sisaldab Euroopa standardi EN 1104:2018 ingliskeelset teksti.	This Estonian standard EVS-EN 1104:2018 consists of the English text of the European standard EN 1104:2018.
Standard on jõustunud sellekohase teate avaldamisega EVS Teatajas	This standard has been endorsed with a notification published in the official bulletin of the Estonian Centre for Standardisation.
Euroopa standardimisorganisatsioonid on teinud Euroopa standardi rahvuslikele liikmetele kättesaadavaks 07.11.2018.	Date of Availability of the European standard is 07.11.2018.
Standard on kättesaadav Eesti Standardikeskusest.	The standard is available from the Estonian Centre for Standardisation.

Tagasisidet standardi sisu kohta on võimalik edastada, kasutades EVS-i veebilehel asuvat tagasiside vormi või saates e-kirja meiliaadressile <u>standardiosakond@evs.ee</u>.

## EUROPEAN STANDARD

### NORME EUROPÉENNE

**EUROPÄISCHE NORM** 

November 2018

**EN 1104** 

ICS 67.250; 85.060

#### **English Version**

# Paper and board intended to come into contact with foodstuffs - Determination of the transfer of antimicrobial constituents

Papier et carton destinés à entrer en contact avec les denrées alimentaires - Détermination du transfert des constituants antimicrobiens Papier und Pappe vorgesehen für den Kontakt mit Lebensmitteln - Bestimmung des Übergangs antimikrobieller Bestandteile

This European Standard was approved by CEN on 15 July 2018.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

#### **European foreword**

This document (EN 1104:2018) has been prepared by Technical Committee CEN/TC 172 "Pulp, paper and board", the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by May 2019, and conflicting national standards shall be withdrawn at the latest by May 2019.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

This document supersedes EN 1104:2005.

With regards to EN 1104:2005 the following changes have been made:

- a) The definition of the inhibition zone has been clarified;
- b) Modified Sabouraud nutrient medium for the preparation of *Aspergillus niger* spores has been replaced by 4 % Sabouraud;
- c) Guidelines for interpreting the results in Annex A have been added, including figures: these guidelines are intended to aid the interpretation of results obtained in the framework of application of EN 1104 standard for the various controls performed and for the samples tested;
- d) Editorial updating.

According to the CEN-CENELEC Internal Regulations, the national standards organisations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

#### 1 Scope

This document specifies a method for the determination of transfer of antimicrobial constituents from paper and board materials and articles intended for food contact.

NOTE The need of using this Standard may be specified by the legislation regarding paper and board intended to come into contact with foodstuffs.

#### 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN ISO 186, Paper and board — Sampling to determine average quality (ISO 186)

EN ISO 7218, Microbiology of food and animal feeding stuffs — General requirements and guidance for microbiological examinations (ISO 7218)

EN ISO 11133, Microbiology of food, animal feed and water — Preparation, production, storage and performance testing of culture media (ISO 11133)

#### 3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <a href="http://www.electropedia.org/">http://www.electropedia.org/</a>
- ISO Online browsing platform: available at <a href="http://www.iso.org/obp">http://www.iso.org/obp</a>

#### 3.1

#### inhibition zone

obvious area in which growth is absent and which forms around test pieces placed on a nutrient medium inoculated with a preselected test microorganism, due to the release of water-soluble antimicrobial constituents; proof of the presence of an inhibition zone is provided by the absence of test micro-organism growth (translucent zone) in a minimum of 2 mm width zone at the edges of the test pieces

#### 4 Principle

A prepared nutrient medium is mixed with an appropriate inoculum and poured into Petri dishes. The test pieces are placed on the nutrient medium before its complete solidification and then incubated. When incubation is terminated, the existence of an inhibition zone is an indicator of the release of antimicrobial constituents.

The test is performed with a bacterium, *Bacillus subtilis*, and with a fungus, *Aspergillus niger*.

NOTE The result is based on a visual decision.
