This European Standard was approved by CENELEC on 2007-09-01. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the Central Secretariat has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and the United Kingdom.

Central Secretariat: rue de Stassart 35, B - 1050 Brussels

Foreword

This European Standard was prepared by the Technical Committee CENELEC TC 86BXA, Fibre optic interconnect, passive and connectorised components.

The text of the draft was submitted to the Unique Acceptance Procedure and was approved by CENELEC as EN 50377-11-1 on 2007-09-01.

The following dates were fixed:

- latest date by which the EN has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2008-09-01
 - latest date by which the national standards conflicting with the EN have to be withdrawn (dow) 2010-09-01
-

Connector sets and interconnect components to be used in optical fibre communication systems - Product specifications		
Part 11-1: Type MF terminated on IEC 60793-2-50 category B1.1 and B1.3 singlemode fibre for category C		
Coupling mechanism:	Description back plane	Performance For use backplane application (test severities derived from IEC cat C)
Configuration:	plug and socket	Attenuation grades: (Random mated) B: $\leq 0,12$ dB mean $\leq 0,25$ dB for $> 97\%$ of measurements C: $\leq 0,25$ dB mean $\leq 0,50$ dB for $> 97\%$ of measurements
Fibre Category:	EN 60793-2-50 type B1.1 and B1.3	Return loss grade: 2: ≥ 45 dB
Cable Type:	See Table 3

1 Scope

1.1 Product definition

This specification contains the initial, start of life dimensional, optical, mechanical and environmental performance requirements which a terminated and assembled singlemode MF 4-fold-connector set (for backplane applications) must meet in order to be categorised as an EN standard product.

Since different variants and grades of performance are permitted, product marking details are given in 3.5.

1.2 Intermateability

Although all products conforming to the requirements of this standard will intermate, the resulting level of random attenuation performance will only be ensured in accordance with Table 1. The intention is that this will be true irrespective of the manufacturing source(s) of the product.

When intermatating plug variants having different attenuation grades, the resulting level of attenuation can not be assured to be any better than the worst attenuation grade.

The intermatating of a grade C plug with a grade B plug will result in an uncertain level of random attenuation performance.

Table 1 - Ensured level of random attenuation

Plug variant/Attenuation grade	C	B
C	C	C
B	C	B

1.3 Operating environment

The tests selected combined with the severities and durations are derived from the category C environment, according to EN 61753-1.

1.4 Reliability

Whilst the anticipated service life expectancy of the product in this environment is 20 years, compliance with this specification does not guarantee the reliability of the product. This should be predicted using a recognised reliability assessment programme.

1.5 Quality assurance

Compliance with this specification does not guarantee the manufacturing consistency of the product. This should be maintained using a recognised quality assurance programme.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3 Description

The MF connector is a single position plug connector set of plug and socket configuration characterised by a rectangular, spring loaded butting ferrule with up to 12 fibres and a backplane coupling mechanism. The optical alignment mechanism of the connectors is of a precision pin and hole type.

3.1 Plug

The plug features a rectangular thermo plastic composite ferrule and a latched coupling mechanism.

A cover (dustcap) to protect the ferrule endface when the connector is in the unmated condition shall be provided.

3.2 Housings

The housings B2 and B3 (see Annex B) have no role in the final alignment mechanism. The mounting style is:

EN 61076-4-100	Back plane	MF-A/MF-B
----------------	------------	-----------

See Annex A.

Covers (dustcaps) shall be provided to protect each port of the adaptor.

3.3 Materials

Materials which are not specified or which are not specifically described are left to the discretion of the manufacturer. The material for the ferrule is Polyphenylene Sulphide (PPS) material with a Young's modulus of 20 GPa nominal and guide pins which are of stainless steel. Alternative materials, which have compatible material properties, may be used as long as endface and performance requirements are met under all conditions as specified in this document.

3.4 Dimensions

Outline dimensions and other dimensions necessary to ensure intermateability or which affect performance are specified. All other dimensions are left to the discretion of the manufacturer. Where the mating face limit dimensions are not in agreement with an IEC interface this is clearly stated.
