Foreword	xxvii
Introduction	xxviii
1 Scope	1
1.1 General	1
2 Conformance	1
2.1 General	1
2.2 Process Modeling Conformance	2
2.2.1 BPMN Process Types	2
2.2.2 BPMN Process Elements	3
2.2.3 Visual Appearance	8
2.2.4 Structural Conformance	8
2.2.5 Process Semantics	9
2.2.6 Attributes and Model Associations	9
2.2.7 Extended and Optional Elements	9
2.2.8 Visual Interchange	10
2.3 Process Execution Conformance	10
2.3.1 Execution Semantics	10
2.3.2 Import of Process Diagrams	10
2.4 BPEL Process Execution Conformance	10
2.5 Choreography Modeling Conformance	10
2.5.1 BPMN Choreography Types	10
2.5.2 BPMN Choreography Elements	11
2.5.3 Visual Appearance	11
2.5.4 Choreography Semantics	11
2.5.5 Visual Interchange	11
2.6 Summary of BPMN Conformance Types	12
3 Normative References	12
3.1 General	12
3.2 Normative	13
3.3 Non-Normative	13
4 Terms and Definitions	16
5 Symbols	16
6 Additional Information	16
6.1 Conventions	16
6.1.1 Typographical and Linguistic Conventions and Style	16
6.1.2 Abbreviations	17
6.2 Structure of this Document	17

6.3 Acknowledgments	17
7 Overview	19
7.1 General	19
7.2 BPMN Scope	20
7.2.1 Uses of BPMN	21
7.3 BPMN Elements	25
7.3.1 Basic BPMN Modeling Elements	26
7.3.2 Extended BPMN Modeling Elements	29
7.4 BPMN Diagram Types	39
7.5 Use of Text, Color, Size, and Lines in a Diagram	39
7.6 Flow Object Connection Rules	40
7.6.1 Sequence Flow Connections Rules	40
7.6.2 Message Flow Connection Rules	41
7.7 BPMN Extensibility	42
7.8 BPMN Example	43
8 BPMN Core Structure	47
8.1 General	47
8.2 Infrastructure	49
8.2.1 Definitions	49
8.2.2 Import	51
8.2.3 Infrastructure Package XML Schemas.....	52
8.3 Foundation	53
8.3.1 Base Element	54
8.3.2 Documentation	54
8.3.3 Extensibility	55
8.3.4 External Relationships	59
8.3.5 Root Element	62
8.3.6 Foundation Package XML Schemas	62
8.4 Common Elements	64
8.4.1 Artifacts	64
8.4.2 Correlation	72
8.4.3 Error	79
8.4.4 Escalation	80
8.4.5 Events	81
8.4.6 Expressions	82
8.4.7 Flow Element	84
8.4.8 Flow Elements Container	86
8.4.9 Gateways	88
8.4.10 Item Definition	89
8.4.11 Message	91
8.4.12 Resources	93
8.4.13 Sequence Flow	95
8.4.14 Common Package XML Schemas	98
8.5 Services	101
8.5.1 Interface	102
8.5.2 EndPoint	103

8.5.3 Operation	103
8.5.4 Service Package XML Schemas	104
9 Collaboration	107
9.1 General	107
9.2 Basic Collaboration Concepts	110
9.2.1 Use of BPMN Common Elements	110
9.3 Pool and Participant	111
9.3.1 Participants	113
9.3.2 Lanes	119
9.4 Message Flow	119
9.4.1 Interaction Node	122
9.4.2 Message Flow Associations	122
9.5 Conversations	123
9.5.1 Conversation Node	127
9.5.2 Conversation	129
9.5.3 Sub-Conversation	129
9.5.4 Call Conversation	130
9.5.5 Global Conversation	131
9.5.6 Conversation Link	131
9.5.7 Conversation Association	134
9.5.8 Correlations	135
9.6 Process within Collaboration	136
9.7 Choreography within Collaboration	136
9.8 Collaboration Package XML Schemas	138
10 Process	143
10.1 General	143
10.2 Basic Process Concepts	147
10.2.1 Types of BPMN Processes	147
10.2.2 Use of BPMN Common Elements	148
10.3 Activities	149
10.3.1 Resource Assignment	152
10.3.2 Performer	154
10.3.3 Tasks	154
10.3.4 Human Interactions	163
10.3.5 Sub-Processes	171
10.3.6 Call Activity	182
10.3.7 Global Task	186
10.3.8 Loop Characteristics	188
10.3.9 XML Schema for Activities	194
10.4 Items and Data	202
10.4.1 Data Modeling	202
10.4.2 Execution Semantics for Data	224
10.4.3 Usage of Data in XPath Expressions	225
10.4.4 XML Schema for Data	228
10.5 Events	232
10.5.1 Concepts	233
10.5.2 Start Event	237

10.5.3 End Event	245
10.5.4 Intermediate Event	248
10.5.5 Event Definitions	259
10.5.6 Handling Events	274
10.5.7 Scopes	280
10.5.8 Events Package XML Schemas	281
10.6 Gateways	286
10.6.1 Sequence Flow Considerations	288
10.6.2 Exclusive Gateway	289
10.6.3 Inclusive Gateway	291
10.6.4 Parallel Gateway	292
10.6.5 Complex Gateway	294
10.6.6 Event-Based Gateway	296
10.6.7 Gateway Package XML Schemas	300
10.7 Compensation	301
10.7.1 Compensation Handler	302
10.7.2 Compensation Triggering	303
10.7.3 Relationship between Error Handling and Compensation	304
10.8 Lanes	304
10.9 Process Instances, Unmodeled Activities, and Public Processes	308
10.10 Auditing	310
10.11 Monitoring	310
10.12 Process Package XML Schemas	311
11 Choreography	315
11.1 General	315
11.2 Basic Choreography Concepts	317
11.3 Data	319
11.4 Use of BPMN Common Elements	319
11.4.1 Sequence Flow	320
11.4.2 Artifacts	321
11.5 Choreography Activities	321
11.5.1 Choreography Task	323
11.5.2 Sub-Choreography	328
11.5.3 Call Choreography	333
11.5.4 Global Choreography Task	335
11.5.5 Looping Activities	335
11.5.6 The Sequencing of Activities	335
11.6 Events	339
11.6.1 Start Events	339
11.6.2 Intermediate Events	340
11.6.3 End Events	343
11.7 Gateways	344
11.7.1 Exclusive Gateway	344
11.7.2 Event-Based Gateway	349
11.7.3 Inclusive Gateway	351
11.7.4 Parallel Gateway	358
11.7.5 Complex Gateway	360

11.7.6 Chaining Gateways	361
11.8 Choreography within Collaboration	361
11.8.1 Participants	361
11.8.2 Swimlanes	362
11.9 XML Schema for Choreography	363
12 BPMN Notation and Diagrams	367
12.1 BPMN Diagram Interchange (BPMN DI)	367
12.1.1 Scope	367
12.1.2 Diagram Definition and Interchange	367
12.1.3 How to Read this Clause	368
12.2 BPMN Diagram Interchange (DI) Meta-model	368
12.2.1 Overview	368
12.2.2 Abstract Syntax	368
12.2.3 Classifier Descriptions	370
12.2.4 Complete BPMN DI XML Schema	378
12.3 Notational Depiction Library and Abstract Element Resolutions	380
12.3.1 Labels	381
12.3.2 BPMNShape	381
12.3.3 BPMNEdge	410
12.4 Example(s)	412
12.4.1 Depicting Content in a Sub-Process	412
12.4.2 Multiple Lanes and Nested Lanes	417
12.4.3 Vertical Collaboration	418
12.4.4 Conversation	419
12.4.5 Choreography	421
13 BPMN Execution Semantics	425
13.1 General	425
13.2 Process Instantiation and Termination	426
13.3 Activities	426
13.3.1 Sequence Flow Considerations	427
13.3.2 Activity	428
13.3.3 Task	430
13.3.4 Sub-Process/Call Activity	430
13.3.5 Ad-Hoc Sub-Process	431
13.3.6 Loop Activity	432
13.3.7 Multiple Instances Activity	432
13.4 Gateways	434
13.4.1 Parallel Gateway (Fork and Join)	434
13.4.2 Exclusive Gateway (Exclusive Decision (data-based) and Exclusive Merge)	434
13.4.3 Inclusive Gateway (Inclusive Decision and Inclusive Merge)	435
13.4.4 Event-based Gateway (Exclusive Decision (event-based))	437
13.4.5 Complex Gateway (related to Complex Condition and Complex Merge)	437
13.5 Events	439
13.5.1 Start Events	439
13.5.2 Intermediate Events	440
13.5.3 Intermediate Boundary Events	440
13.5.4 Event Sub-Processes	440

13.5.5 Compensation	441
13.5.6 End Events	443
14 Mapping BPMN Models to WS-BPEL	445
14.1 General	445
14.2 Basic BPMN-BPEL Mapping	446
14.2.1 Process	447
14.2.2 Activities	448
14.2.3 Events	455
14.2.4 Gateways and Sequence Flows	461
14.2.5 Handling Data	465
14.3 Extended BPMN-BPEL Mapping	469
14.3.1 End Events	469
14.3.2 Loop/Switch Combinations From a Gateway	469
14.3.3 Interleaved Loops	470
14.3.4 Infinite Loops	473
14.3.5 BPMN Elements that Span Multiple WSBPEL Sub-Elements	473
15 Exchange Formats	475
15.1 Interchanging Incomplete Models	475
15.2 Machine Readable Files	475
15.3 XSD	475
15.3.1 Document Structure	475
15.3.2 References within the BPMN XSD	476
15.4 XMI	477
15.5 XSLT Transformation between XSD and XMI	477
Annex A - Changes from v1.2.....	479
Annex B - Diagram Interchange.....	481
Annex C - Glossary.....	499
Annex D - Legal Information	505

Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of the joint technical committee is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

ISO/IEC 19510 was prepared by the Object Management Group (OMG), as the OMG Business Process Model and Notation (BPMN), version 2.0.1, and was adopted, under the PAS procedure, by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, in parallel with its approval by national bodies of ISO and IEC.

Introduction

The primary goal of BPMN is to provide a notation that is readily understandable by all business users, from the business analysts that create the initial drafts of the processes, to the technical developers responsible for implementing the technology that will perform those processes, and finally, to the business people who will manage and monitor those processes. Thus, BPMN creates a standardized bridge for the gap between the business process design and process implementation.

This specification represents the amalgamation of best practices within the business modeling community to define the notation and semantics of Collaboration diagrams, Process diagrams, and Choreography diagrams. The intent of BPMN is to standardize a business process model and notation in the face of many different modeling notations and viewpoints. In doing so, BPMN will provide a simple means of communicating process information to other business users, process implementers, customers, and suppliers.

The specification provided by this International Standard is identical to OMG BPMN 2.0.1.

Information technology - Object Management Group Business Process Model and Notation

1 Scope

1.1 General

The **Object Management Group** (OMG) has developed a standard **Business Process Model and Notation (BPMN)**. The primary goal of **BPMN** is to provide a notation that is readily understandable by all business users, from the business analysts that create the initial drafts of the processes, to the technical developers responsible for implementing the technology that will perform those processes, and finally, to the business people who will manage and monitor those processes. Thus, **BPMN** creates a standardized bridge for the gap between the business process design and process implementation.

Another goal, but no less important, is to ensure that XML languages designed for the execution of business processes, such as **WSBPEL** (Web Services Business Process Execution Language), can be visualized with a business-oriented notation.

This International Standard represents the amalgamation of best practices within the business modeling community to define the notation and semantics of **Collaboration** diagrams, **Process** diagrams, and **Choreography** diagrams. The intent of **BPMN** is to standardize a business process model and notation in the face of many different modeling notations and viewpoints. In doing so, **BPMN** will provide a simple means of communicating process information to other business users, process implementers, customers, and suppliers.

The membership of the OMG has brought forth expertise and experience with many existing notations and has sought to consolidate the best ideas from these divergent notations into a single standard notation. Examples of other notations or methodologies that were reviewed are UML Activity Diagram, UML EDOC Business Processes, IDEF, ebXML BPSS, Activity-Decision Flow (ADF) Diagram, RosettaNet, LOVEM, and Event-Process Chains (EPCs).

2 Conformance

2.1 General

Software can claim compliance or conformance with **BPMN 2.0** if and only if the software fully matches the applicable compliance points as stated in the International Standard. Software developed only partially matching the applicable compliance points can claim only that the software was based on this International Standard, but cannot claim compliance or conformance with this International Standard. The International Standard defines four types of conformance namely **Process Modeling Conformance**, **Process Execution Conformance**, **BPEL Process Execution Conformance**, and **Choreography Modeling Conformance**.
