EESTI STANDARDI EESSÕNA

NATIONAL FOREWORD

See Eesti standard EVS-EN 12012-4:2019+A1:2021 sisaldab Euroopa standardi EN 12012-4:2019+A1:2021 ingliskeelset teksti.	This Estonian standard EVS-EN 12012-4:2019+A1:2021 consists of the English text of the European standard EN 12012-4:2019+A1:2021.
Standard on jõustunud sellekohase teate avaldamisega EVS Teatajas.	This standard has been endorsed with a notification published in the official bulletin of the Estonian Centre for Standardisation and Accreditation.
Euroopa standardimisorganisatsioonid on teinud Euroopa standardi rahvuslikele liikmetele kättesaadavaks 13.10.2021.	Date of Availability of the European standard is 13.10.2021.
Standard on kättesaadav Eesti Standardimis- ja Akrediteerimiskeskusest.	The standard is available from the Estonian Centre for Standardisation and Accreditation.

Tagasisidet standardi sisu kohta on võimalik edastada, kasutades EVS-i veebilehel asuvat tagasiside vormi või saates e-kirja meiliaadressile standardiosakond@evs.ee.

English Version

Plastics and rubber machines - Size reduction machines - Part 4: Safety requirements for agglomerators

Machines pour les matières plastiques et le caoutchouc
- Machines à fragmenter - Partie 4 : Prescriptions de
sécurité relatives aux agglomérateurs

Kunststoff- und Gummimaschinen -
Zerkleinerungsmaschinen - Teil 4:
Sicherheitsanforderungen für Agglomeratoren

This European Standard was approved by CEN on 29 April 2019 and includes Amendment 1 approved by CEN on 3 August 2021.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

European foreword

This document (EN 12012-4:2019+A1:2021) has been prepared by Technical Committee CEN/TC 145 "Plastics and rubber machines", the secretariat of which is held by UNI.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by April 2022, and conflicting national standards shall be withdrawn at the latest by April 2022.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

This document supersedes $\boxed{A_1}$ EN 12012-4:2019 $\langle A_1 \rangle$.

The start and finish of text introduced or altered by amendment is indicated in the text by tags $\boxed{A_1}$ $\langle A_1 \rangle$.

This document has been prepared under a Standardization Request given to CEN by the European Commission and the European Free Trade Association, and supports essential requirements of EU Directive(s) / Regulation(s).

For relationship with EU Directive(s) / Regulation(s), see informative Annex ZA, which is an integral part of this document.

The main changes compared to the EN 12012-4:2006+A1:2008 are:

- the revision of type-A and type-B standards have been considered;
- the list of significant hazards has been moved to an informative annex;
- the performance levels/safety integrity levels of safety related parts of control systems have been specified in accordance with EN ISO 13849-1:2015 / EN 62061:2005, EN 62061:2005/A1:2013, EN 62061:2005/A2:2015;
- the hazards related to the ejection of parts or materials from the agglomerator chamber have been removed because reliable and well-designed chambers represent now the state of the art (no projections and no broken chamber have been reported for a long time);
- feed openings of big dimensions are considered;
- requirements for moving parts of discharge systems are added;
- $\boxed{A_1}$ — the agglomerators with actuators moved by pneumatic and/or hydraulic energy have been excluded from the Scope; $\langle A_1 \rangle$
- the annex for noise measurement has been revised.

$\boxed{A_1}$ In comparison with the original version EN 12012-4:2019, the following technical and editorial modifications have been made by amendment EN 12012-4:2019/A1:2021:

- European Foreword: dash added;
- Scope: editorial modification and dash added;

- Normative references: a reference date updated;
- 4.2.1: updated normative references;
- 4.2.3: updated normative reference;
- 4.6.1.3: modified text;
- 4.6.1.4: modified text;
- 4.7.2: modified text;
- 4.7.3: updated normative reference;
- 6.2.1: modified text;
- 6.3.2: modified text;
- Table Annex ZA: modified text. **A1**

Any feedback and questions on this document should be directed to the users' national standards body. A complete listing of these bodies can be found on the CEN website.

According to the CEN-CENELEC Internal Regulations, the national standards organisations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Introduction

This document is a type-C standard as stated in EN ISO 12100:2010.

This document is of relevance, in particular, for the following stakeholder groups representing the market players with regard to machinery safety:

- machine manufacturers (small, medium and large enterprises);
- health and safety bodies (regulators, accident prevention organizations, market surveillance, etc.).

Others can be affected by the level of machinery safety achieved with the means of the document by the above-mentioned stakeholder groups:

- machine users/employers (small, medium and large enterprises);
- machine users/employees (e.g. trade unions, organizations for people with special needs);
- service providers, e.g. for maintenance (small, medium and large enterprises);
- consumers (in case of machinery intended for use by consumers).

The above-mentioned stakeholder groups have been given the possibility to participate at the drafting process of this document.

The machinery concerned and the extent to which hazards, hazardous situations or hazardous events are covered are indicated in the Scope of this document.

When requirements of this type-C standard are different from those which are stated in type-A or type-B standards, the requirements of this type-C standard take precedence over the requirements of the other standards for machines that have been designed and built according to the requirements of this type-C standard.

1 Scope

A1 This document deals with all significant hazards, hazardous situations and events relevant to agglomerators for the modification of plastic scraps in its form, size and flow characteristics, when they are used as intended and under conditions of misuse which are reasonably foreseeable by the manufacturer (see Annex A). The hazards have been identified taking into account all phases of the machine life cycle according to EN ISO 12100:2010, 5.4.

Machines considered in this document begin at the outer edge of the feed opening and end at the outer edge of the discharge opening.

This document does not deal with:

- hazards due to emissions by processing materials that could be hazardous to health;
- hazards caused by ignition of flammable residues in material to be processed;
- requirements for exhaust ventilation systems;
- agglomerators moved by pneumatic and/or hydraulic energy.

This document is not applicable to agglomerators manufactured before the date of its publication. **A1**

3 Terms and definitions

For the purposes of this document, the terms and definitions given in EN ISO 12100:2010 and the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <https://www.electropedia.org/>
- ISO Online browsing platform: available at <https://www.iso.org/obp>

3.1

agglomerator

machine (sometimes called densifier) for modifying the form, size and flow characteristics of thermoplastic scrap in a chamber

Note 1 to entry: The material is cut, kneaded, mixed, or heated by friction to increase the flow of the material.

3.2

agglomerating tool

tool, secured on a rotating structure (e.g. disc) which can be combined with a stationary counter tool, to modify the material being processed in form, size and flow characteristics

3.3

feeding equipment

hopper, that is an integral part of the machine, used to feed the material to be processed

3.4

discharge system

equipment that is an integral part of the machine such as power rotating screw etc. used to discharge the material from the agglomerator

4 Safety requirements and/or protective/risk reduction measures

4.1 General

Machinery shall comply with the safety requirements and/or protective/risk reduction measures of this clause. In addition, the machine shall be designed according to the principles of EN ISO 12100:2010 for relevant but not significant hazards that are not dealt with by this document.

The safety related parts of the control system shall be in accordance with EN ISO 13849-1:2015 or EN 62061:2005, EN 62061:2005/A1:2013, EN 62061:2005/A2:2015. The required performance levels (PL_r) or Safety Integrity Levels (SIL) are given in the relevant subclauses.
