## Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives) or [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs)).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at [www.iso.org/patents](http://www.iso.org/patents). ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html). In the IEC, see [www.iec.ch/understanding-standards](http://www.iec.ch/understanding-standards).

This document was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 35, *User interfaces*.

A list of all parts in the ISO/IEC 23859 series can be found on the ISO and IEC websites.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html) and [www.iec.ch/national-committees](http://www.iec.ch/national-committees).

## Introduction

Written text can be printed or digital (or a combination of both) and can be found in different types of content and environments.

Written text can also be found in audiovisual formats.

Written text generally relies on visual perception, but there are also tactile writing systems such as Braille.

This document adopts a universal design perspective. Written text should be created and presented in ways that allow the widest range of people to access it. Universal design shall not exclude adaptation and assistive technologies for particular groups where needed.

This document takes into consideration:

- the various needs and preferences of diverse users,
- the different approaches to the concept of easy to read and understand, and
- a multimodal concept of text, which is a combination of two or more modalities, such as written text, visual elements and audio.

# Information technology — User interfaces — Requirements and recommendations on making written text easy to read and understand

## 1 Scope

This document provides requirements and recommendations on all written text so that it is easy to read and understand in any user interface, regardless of its format.

This document addresses the process of creation, adaptation and evaluation of written text that is easy to read and understand.

This document does not consider devices or transmission mechanisms used to deliver written text. It does not provide language-specific guidance.

## 2 Normative references

There are no normative references in this document.

## 3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <https://www.electropedia.org/>

### 3.1 General terms

#### 3.1.1

##### **easy-to-understand language**

any language variety which enhances comprehensibility

Note 1 to entry: Easy-to-understand language includes *plain language* (3.1.2), *easy language* (3.1.3) and any intermediate variety. These varieties share many recommendations, but the extent of comprehensibility is different as they address different user needs.

#### 3.1.2

##### **plain language**

language variety whose wording, structure and design are so clear that the intended readers can easily find what they need, understand what they find and use that information

Note 1 to entry: The International Plain Language Federation<sup>[2]</sup> defines plain language as a communication in which wording, structure and design are so clear that the intended readers can easily find what they need, understand what they find, and use that information. In this document, plain language is defined as a language variety for the reasons expressed in Note 1 to entry 3.1.1.
