Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives or www.iec.ch/members_experts/refdocs).

ISO and IEC draw attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO and IEC take no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO and IEC had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents and <https://patents.iec.ch>. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html. In the IEC, see www.iec.ch/understanding-standards.

This document was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 32, *Data management and interchange*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html and www.iec.ch/national-committees.

Introduction

The purpose of this document is to provide terminology and use cases in order to support organizations during the decision-making processes that occur throughout the use, sharing and exchange of data.

Given the breadth of data use, exchange and sharing activities, these use cases are presented with a description of the data usage activity including an overview of the data project, objectives, relevant entities involved, and the processes and interventions used in each case.

The use cases are structured to assist users in identifying the decision-making processes within data related activities, irrespective of the business or industry sector context. These use cases can provide users with guidance in considering where control measures can be applied to manage risks within the data process, the data lifecycle or the data environment.

This document can be used in the development of other International Standards and in support of communications among diverse stakeholders and other interested parties.

ISO/IEC 5207 was developed in collaboration with ISO/IEC 5212. Users of this document can refer to ISO/IEC 5212 for additional guidance for the decision-making process for the use, sharing and exchange of data.

Information technology — Data usage — Terminology and use cases

1 Scope

This document sets out terminology and use cases for data use, sharing and exchange. This document provides use cases detailing various types of data usage from both historical and hypothetical perspectives.

This document is applicable to all types of organizations.

2 Normative references

There are no normative references in this document.

3 Terms, definitions and abbreviated terms

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <https://www.electropedia.org/>.

3.1 information

<information processing> knowledge concerning objects, such as facts, events, things, processes, or ideas, including concepts, that within a certain context has a particular meaning

[SOURCE: ISO/IEC 2382:2015, 2121271, modified — Notes to entry deleted]

3.2 data

re-interpretable representation of *information* (3.1) in a formalized manner suitable for communication, interpretation, or processing

Note 1 to entry: Data can be used for communication, interpretation or processing by humans or automatic means.

Note 2 to entry: Communication, interpretation or processing can include the exchange or sharing of data by one or more entities.

[SOURCE: ISO/IEC 2382:2015, 2121272, modified — Note 1 to entry modified, Note 2 to entry replaced and Note 3 deleted]

3.3 metadata

data (3.2) that defines and describes other data

[SOURCE: ISO/IEC 11179-3:2023, 3.2.30]
