EUROPEAN STANDARD

EN 14585

NORME EUROPÉENNE

EUROPÄISCHE NORM

October 2024

ICS 23.040.70

Supersedes EN 14585-1:2006, CEN/TR 14585-2:2006,
CEN/TR 14585-3:2017

English Version

Corrugated metal hose assemblies for pressure applications

Tuyauteries métalliques flexibles onduleuses pour applications sous pression

Gewellte Metallschlauchleitungen für Druckerwendungen

This European Standard was approved by CEN on 26 August 2024.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and United Kingdom.

European foreword

This document (FprEN 14585:2024) has been prepared by Technical Committee CEN/TC 342 “Metal hose, hose assemblies, bellows and expansion joints”, the secretariat of which is held by SNV.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by April 2025, and conflicting national standards shall be withdrawn at the latest by April 2025.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

This document supersedes EN 14585-1:2006, CEN/TR 14585-2:2006, CEN/TR 14585-3:2017.

Annex E provides details of significant technical changes between this document and the previous edition.

This document has been prepared under a standardization request addressed to CEN by the European Commission. The Standing Committee of the EFTA States subsequently approves these requests for its Member States.

For the relationship with EU Legislation, see informative Annex ZA, which is an integral part of this document.

This document has been produced to address the specific needs of corrugated metal hose assemblies for pressure applications. For applications outside the scope of EU Directive 2014/68/EU, refer to EN ISO 10380:2012.

Any feedback and questions on this document should be directed to the users' national standards body. A complete listing of these bodies can be found on the CEN website.

According to the CEN-CENELEC Internal Regulations, the national standards organisations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and the United Kingdom.

Introduction

Corrugated metal hose assemblies are used as components in piping.

The requirements of this document impact designers, manufacturers, suppliers and importers of corrugated metal hose assemblies for pressure applications.

The unique nature of a corrugated metal hose assembly is characterized by:

- the opposing requirements of pressure resistance and flexibility;
- the interactive role of its pressure bearing parts: corrugated metal hose, braid, end fittings and its permanent joints.

As a general rule PED [1] Annex I, Clause 2.2.2 limits the experimental design method for piping to $PS \cdot DN$ less than 3000. Validation tests are, however, intended to support design of corrugated metal hose assemblies for all practically achievable values of $PS \cdot DN$.

Regarding sound engineering practice (SEP), the manufacturer is responsible for its application based on relevant standards or other professional codes. Corrugated metal hose assemblies according to SEP are expected to be designed, manufactured, verified and delivered with instructions for use in order to ensure their safety during their intended life, when used in foreseeable or reasonably foreseeable conditions.

NOTE 1 EN ISO 10380:2012 or relevant professional codes answer sound engineering practice requirements.

NOTE 2 See also PED Guidelines I-01 [5] and I-09 [6].

1 Scope

This document specifies the requirements for design, manufacture and installation of corrugated metal hose assemblies for pressure applications, i.e. maximum allowable pressure PS greater than 0,5 bar.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3 Terms and definitions

For the purposes of this document, the terms and definitions in EN ISO 7369:2020 and the following apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <https://www.electropedia.org/>

3.1

metal hose assembly

assembly of a corrugated metal hose with its end fittings

3.2

maximum allowable pressure

PS

maximum pressure at the operating temperature for which the metal hose assembly is designed

Note 1 to entry: See also 6.2.1.

3.3

maximum allowable pressure at 20°C

PS₂₀

equivalent maximum pressure at ambient temperature for which the metal hose assembly is designed

3.4

minimum allowable temperature

minimum allowable temperature *TS*

minimum temperature for which the metal hose assembly is designed

Note 1 to entry: See also 6.2.1.

3.5

maximum allowable temperature

maximum allowable temperature *TS*

maximum temperature for which the metal hose assembly is designed

Note 1 to entry: See also 6.2.1.

3.6

nominal pressure

PN

dimensionless alphanumeric designation which is a convenient rounded number commonly used for reference purposes of piping components and stock parts
