## Wind energy generation systems - Part 4: Design requirements for wind turbine gearboxes (IEC 61400-4:2025)

Systèmes de génération d'énergie éolienne - Partie 4:  
Exigences de conception des boîtes de vitesses des  
éoliennes  
(IEC 61400-4:2025)

Windenergieanlagen - Teil 4: Auslegungsanforderungen für  
Getriebe von Windenergieanlagen  
(IEC 61400-4:2025)

This European Standard was approved by CENELEC on 2025-05-20. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and the United Kingdom.

## European foreword

The text of document 88/971/CDV, future edition 2 of IEC 61400-4, prepared by TC 88 "Wind energy generation systems" was submitted to the IEC-CENELEC parallel vote and approved by CENELEC as EN IEC 61400-4:2025.

The following dates are fixed:

- latest date by which the document has to be implemented at national (dop) 2026-05-31 level by publication of an identical national standard or by endorsement
- latest date by which the national standards conflicting with the (dow) 2028-05-31 document have to be withdrawn

This document supersedes EN 61400-4:2013 and all of its amendments and corrigenda (if any).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC shall not be held responsible for identifying any or all such patent rights.

Any feedback and questions on this document should be directed to the users' national committee. A complete listing of these bodies can be found on the CENELEC website.

## Endorsement notice

The text of the International Standard IEC 61400-4:2025 was approved by CENELEC as a European Standard without any modification.

In the official version, for Bibliography, the following notes have to be added for the standard indicated:

IEC 61400-24	NOTE	Approved as EN IEC 61400-24
ISO 9000	NOTE	Approved as EN ISO 9000

**About the IEC**

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

**About IEC publications**

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

**IEC publications search - [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)**

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

**IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)**

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

**IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)**

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [sales@iec.ch](mailto:sales@iec.ch).

**IEC Products & Services Portal - [products.iec.ch](http://products.iec.ch)**

Discover our powerful search engine and read freely all the publications previews, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

**Electropedia - [www.electropedia.org](http://www.electropedia.org)**

The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

**WIND ENERGY GENERATION SYSTEMS –****Part 4: Design requirements for wind turbine gearboxes**

## FOREWORD

- 1) ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.
- 2) The formal decisions or agreements of IEC and ISO on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC and ISO National bodies.
- 3) IEC and ISO documents have the form of recommendations for international use and are accepted by IEC and ISO National bodies in that sense. While all reasonable efforts are made to ensure that the technical content of IEC and ISO documents is accurate, IEC and ISO cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC and ISO National bodies undertake to apply IEC and ISO documents transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC and ISO document and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC and ISO do not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC and ISO marks of conformity. IEC and ISO are not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this document.
- 7) No liability shall attach to IEC and ISO or their directors, employees, servants or agents including individual experts and members of its technical committees and IEC and ISO National bodies for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this ISO/IEC document or any other IEC and ISO documents.
- 8) Attention is drawn to the Normative references cited in this document. Use of the referenced publications is indispensable for the correct application of this document.
- 9) IEC and ISO draw attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC and ISO take no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC and ISO had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch> and [www.iso.org/patents](http://www.iso.org/patents). IEC and ISO shall not be held responsible for identifying any or all such patent rights.

IEC 61400-4 has been prepared by IEC technical committee 88: Wind energy generation systems, in co-operation with ISO technical committee 60: Gears. It is an International Standard.

It is published as a double logo standard.

This second edition cancels and replaces the first edition published in 2012. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) extension of the scope to wind turbines above 2 MW reference power;
- b) considerations for converging differing approaches to reliability in gear, bearing and wind turbine standards;

- c) new clause on wind turbine loads specific to drivetrains;
- d) revised clause on verification and validation;
- e) new clause on design requirements for plain bearings;
- f) revised and expanded design considerations for rolling bearings;
- g) revised clause on considerations and requirements in the design and analysis of gearbox structural elements;
- h) updated considerations and requirements on lubricants and lubrication systems;
- i) removal of requirements for documenting the compliance of a design with the requirements of the document in favour of reference to IECRE OD-501-2.

The text of this International Standard is based on the following documents:

Draft	Report on voting
88/971/CDV	88/1003A/RVC

Full information on the voting for its approval can be found in the report on voting indicated in the above table. In ISO, the standard has been approved by 11 P-members out of 12 having cast a vote.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs). The main document types developed by IEC are described in greater detail at [www.iec.ch/publications](http://www.iec.ch/publications).

A list of all parts of the IEC 61400 series, under the general title: *Wind energy generation systems*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under [webstore.iec.ch](http://webstore.iec.ch) in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

## INTRODUCTION

IEC 61400-4 outlines minimum requirements for specification, design, and verification of gearboxes in wind turbines. It does not serve as a complete design specification or instruction manual. It is intended for use by experienced designers of wind turbine drivetrains, gearboxes, and gears or bearings who are capable of selecting reasonable values for the design factors, based on knowledge of similar designs and the effects of such items as lubrication, deflection, manufacturing tolerances, metallurgy, residual stress, and system dynamics.

Any of the requirements of this document may be altered:

- if more accurate data are available from full scale load tests, precise measurements, comprehensive mathematical analysis, or any combination of these;
- or on the basis of proven operating experience;
- and if the evidence is accessible for independent assessment (e.g. by an accredited renewable energy certification body);
- and if the accuracy and reliability of the alternative method is demonstrated with respect to the safety and reliability of the complete wind turbine drive system.

## WIND ENERGY GENERATION SYSTEMS –

### Part 4: Design requirements for wind turbine gearboxes

#### 1 Scope

This part of IEC 61400 is applicable to enclosed speed increasing gearboxes for horizontal axis wind turbine drivetrains with a power rating in excess of 500 kW. This document applies to newly designed gearboxes for wind turbines installed onshore or offshore. The technical requirements given in this document are not intended for repaired or refurbished gearboxes, or for the extension of the service life beyond the design life.

This document provides requirements and guidance on the analysis of the wind turbine loads in relation to the design of the gear and gearbox elements. The gearing elements covered by this document include such gears as spur, helical or double helical and their combinations in parallel and epicyclic arrangements in the main power path. This document does not apply to power take off (PTO) gears.

This document includes requirements, design recommendations, and rating of gearboxes with rolling bearings, plain bearings, or combinations of both bearing types.

Also included are requirements and guidance on the engineering of shafts, shaft hub interfaces, lubrication, wind turbine controller interface, and the gear case structure to achieve a design that is capable of withstanding the environment and operating conditions of a wind turbine. Requirements for dynamic analysis of the gearbox within the wind turbine system are specified for the purpose of identifying load levels exceeding the predictions of the global aeroelastic simulation. The analysis of noise transmission and emission (e.g. tonal emission at gear mesh frequencies) is not within the scope of this edition of the document.

Further, this document provides requirements and guidance on gearbox design verification, prototype testing and production testing, as well as consideration of design for service and maintenance.

A method for a systematic assessment of the design reliability of a gearbox design under reference operating conditions is specified in IEC TS 61400-4-1<sup>1</sup>.

This document is supported by two Technical Reports: IEC TR 61400-4-2<sup>2</sup> provides additional information on lubrication of wind turbine drivetrains and IEC TR 61400-4-3<sup>3</sup> contains explanatory notes and supportive information to the requirements specified in this document.

ISO 10683, *Fasteners – Non-electrolytically applied zinc flake coating systems*

ISO 10825-1, *Gears – Wear and damage to gear teeth – Part 1: Nomenclature and characteristics*

ISO 12925-1, *Lubricants, industrial oils and related products (class L): Family C (gears) – Part 1: Specifications for lubricants for enclosed gear systems*

ISO 14104, *Gears – Surface temper etch inspection after grinding, chemical method*

ISO 14635-1:2023, *Gears – FZG test procedures – Part 1: FZG test method A/8,3/90 for relative scuffing load-carrying capacity of oils*

ISO 15243:2017, *Rolling bearings – Damage and failures – Terms, characteristics and causes*

ISO 16281:2025, *Rolling bearings – Methods for calculating the modified reference rating life for universally loaded bearings*

ISO 17956:2025, *Rolling bearings – Method for calculating the effective static safety factor for universally loaded rolling bearings*

ISO 21920-1, *Geometrical product specifications (GPS) – Surface texture: Profile – Part 1: Indication of surface texture*

ISO 21920-2, *Geometrical product specifications (GPS) – Surface texture: Profile – Part 2: Terms, definitions and surface texture parameters*

ISO 21920-3, *Geometrical product specifications (GPS) – Surface texture: Profile – Part 3: Specification operators*

ANSI/AGMA 6001, *Design and selection of components for enclosed gear drives*

ANSI/AGMA 6123, *Design manual for enclosed epicyclic gear drives*

ASTM D445, *Standard test method for kinematic viscosity of transparent and opaque liquids (and calculation of dynamic viscosity)*

ASTM D664, *Standard test method for acid number of petroleum products by potentiometric titration*

ASTM D974, *Standard test method for acid and base number by color-indicator titration*

ASTM D5185, *Standard test method for multielement determination of used and unused lubricating oils and base oils by inductively coupled plasma atomic emission spectrometry (ICP-AES)*

ASTM D6304, *Standard test method for determination of water in petroleum products, lubricating oils, and additives by coulometric Karl Fischer titration*

DIN 471, *Circlips (retaining rings) for shafts: Normal type and heavy type*

DIN 472, *Circlips (retaining rings) for bores: Normal type and heavy type*

DIN 743 (all parts), *Calculation of load capacity of shafts and axles*

DIN 3990-16, *Calculation of load capacity of cylindrical gears – Part 16: Determination of the micro-pitting load-carrying capacity of lubricants using FZG test method GT-C/8.3/90*

DIN 6885-1, *Drive type fastenings without taper action; Parallel keys, keyways, deep pattern*

DIN 6892, *Mitnehmerverbindungen ohne Anzug – Passfedern – Berechnung und Gestaltung (available in German only)*

DIN 7190, *Interference fits – Calculation and design rules*

DIN 51399-1, *Testing of lubricants – Determination of elements content in additives, wear and other contaminations – Part 1: Direct determination by optical emission spectral analysis with inductively coupled plasma (ICP OES)*

DIN 51777, *Petroleum products – Determination of water content using titration according to Karl Fischer*

DIN 51819-3, *Testing of lubricants – Mechanical-dynamic testing in the roller bearing test apparatus FE8 – Part 3: Test method for lubricating oils – Applied test bearing: axial cylindrical roller bearing*

FVA 563 I, *FVA Guideline: Recommendations for the standardization of load carrying capacity test on hardened and tempered cylindrical gears*, Research Association for Drive Technology (FVA). Frankfurt, 2012

VDI 2230-1:2015, *Systematic calculation of highly stressed bolted joints – Joints with one cylindrical bolt*

VDI 2230-2:2014, *Systematic calculation of highly stressed bolted joints – Multi bolted joints*

VDI/VDE 2862-2, *Minimum requirements for application of fastening systems and tools – Applications in plant construction, mechanical engineering, equipment manufacturing and for flange connections in components under pressure boundary*

### 3 Terms, definitions, abbreviated terms, units and conventions

#### 3.1 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

- IEC Electropedia: available at <https://www.electropedia.org/>
- ISO Online browsing platform: available at <https://www.iso.org/obp>

##### 3.1.1

##### **bearing reference load**

load derived from the reference torque acting at the load application point

##### 3.1.2

##### **bulk lubricant temperature**

temperature of the lubricant that is representative of the overall volume of the lubricant within the lubrication system

##### 3.1.3

##### **design load**

load value that the turbine and its components are designed to withstand

Note 1 to entry: Design loads are obtained by applying the appropriate partial load factors to the characteristic load in accordance with IEC 61400-1, IEC 61400-3-1, and IEC TS 61400-3-2.

##### 3.1.4

##### **design validation**

confirmation, through the provision of objective evidence, that the requirements for a specific intended use or application have been fulfilled

[SOURCE: IEC 60050-192:2024, 192-01-18, modified – "design" has been added to the term, notes to entry have been deleted.]

##### 3.1.5

##### **design verification**

confirmation, through the provision of objective evidence, that specified requirements have been fulfilled

[SOURCE: IEC 60050-192:2024, 192-01-17, modified – "design" has been added to the term, notes to entry have been deleted.]
