Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this part of ISO 2380 may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

International Standard ISO 2380-2 was prepared by Technical Committee ISO/TC 29, *Small tools*, Subcommittee SC 10, *Assembly tools for screws and nuts, pliers and nippers*.

This second edition cancels and replaces the first edition (ISO 2380-2:1992), which has been technically revised.

ISO 2380 consists of the following parts, under the general title *Assembly tools for screws and nuts — Screwdrivers for slotted-head screws*:

- *Part 1: Tips for hand- and machine-operated screwdrivers*
- *Part 2: General requirements, lengths of blades and marking of hand-operated screwdrivers*

Assembly tools for screws and nuts — Screwdrivers for slotted-head screws —

Part 2:

General requirements, lengths of blades and marking of hand-operated screwdrivers

1 Scope

This part of ISO 2380 specifies the general requirements, lengths of blades and marking of hand-operated screwdrivers for slotted-head screws as specified in ISO 4759-1.

Requirements for the blade tips are given in ISO 2380-1.

NOTE Screwdrivers for slotted-head screws are listed under number 101 in ISO 1703:1983 [1].

2 Normative references

The following normative documents contain provisions which, through reference in this text, constitute provisions of this part of ISO 2380. For dated references, subsequent amendments to, or revisions of, any of these publications do not apply. However, parties to agreements based on this part of ISO 2380 are encouraged to investigate the possibility of applying the most recent editions of the normative documents indicated below. For undated references, the latest edition of the normative document referred to applies. Members of ISO and IEC maintain registers of currently valid International Standards.

ISO 272, *Fasteners — Hexagon products — Widths across flats.*

ISO 2380-1, *Assembly tools for screws and nuts — Screwdrivers for slotted-head screws — Part 1: Tips for hand- and machine-operated screwdrivers.*

ISO 4759-1, *Tolerances for fasteners — Part 1: Bolts, screws, studs and nuts — Product grades A, B and C.*

3 General requirements

The material, shape and finish of the handle shall be suitable for the normal conditions of use.

The handle and the blade shall not be rough nor have faults which could cause accidents during use of the screwdriver.

The torque requirements of the blade-to-handle connection shall be as specified in ISO 2380-1.
